Volume 10    No. 1

Washington 25, D. C.

January 5, 1962

## GRAIN MARKETS SHOW LITTLE CHANGE

Cash grain prices fluctuated within a narrow range and closed with little or no change for the holiday-shortened week ended January 4. Trading was relatively quiet.

Winter wheat was generally unchanged but had a weak undertone at the close. Selling by southwest farmers picked up slightly following the turn of a new tax year, but offerings were readily absorbed by mills, merchandisers and exporters. Spring wheat edged up 1-2¢ per bushel at Minneapolis. Demand improved, reflecting good flour shipping directions. Durum, on the other hand, declined 2-3¢. White wheat declined 1-2¢ at Portland under pressure from dull export trade and ample supplies in terminal positions. Rye firmed up a little at Minneapolis.

Cash corn prices weakened 1-2¢ per bushel as offerings were more liberal and demand slacked off. Weakness was attributed to some extent by the trade to a discouraged "long" interest in the futures market. Oats followed the action in corn for the most part but closed on a firm note following the revival of speculative interest in possible exports to Canada. A steady to firm trend in barley reflected more export interest and more buying on the part of maltsters and brewers. Grain sorghums held firm. Offerings remained light but about in line with demand.

Soybean prices fluctuated within a tight spread and closed generally unchanged. Spot trading resisted selling pressure in the futures market as the cash article drew some support from the large amount of soybeans under loan and firmness for end products. Flaxseed lost 3¢ per bushel despite considerable buying on a "to arrive" basis at Minneapolis.

<sup>1/</sup> Cash grain closing prices are on-track cash prices established at the close of the market. The terminal rate is used in determining the effective support price for grain in terminal storage or in transit to terminal and for calculating most county support rates. Effective support price is the established terminal support rate for grain received by rail minus the deduction for storage as of the date shown. Terminal price support rates are not established for corn, oats or soybeans at any market, nor for wheat and grain sorghums at Ft. Worth.

<sup>2/</sup> Galveston effective and terminal support price. A terminal support price is not established for Ft. Worth, but the cash price usually is backed by paid-in freight which will carry it to Galveston. Therefore, cash prices at Ft. Worth usually may be compared with effective support price at Galveston.

<sup>3/</sup> Applies only to the varieties Baar/ <sup>Burt</sup> and Bluestem of the sub-class Hard White.

<sup>4/</sup> The monthly average price is the simple average of the daily closing prices.

## GRAIN MARKETS MIXED IN QUIET TRADING

Cash grain markets were irregular during the week ended January 11. However, prices generally showed little inclination to stray very far from the previous week's close.

Winter wheat prices softened. Demand was good, but offerings were heavy enough to check higher bid prices. Southwestern farmers stepped up their selling pace a little, but severe winter weather delayed shipments in many areas. Spring wheat held firm as light offerings provided some buying incentive at Minneapolis, and buyers upped bids 3¢ per bushel on durum in an effort to entice selling. White wheat prices weakened under pressure of dull export sales and available supplies at terminal ports at Portland. Rye, influenced mainly by reports of a rather bleak export picture, dropped 6¢ per bushel at Minneapolis.

Corn prices slipped another 1-2¢ per bushel at principal markets this week as offerings proved on the burdensome side despite continued good demand. Oats ruled firm as buyers showed a little more interest. Barley prices were unchanged at most markets but advanced 4-5¢ at Minneapolis where buyers were quite aggressive. Grain sorghums held steady. Weather hampered country movement, and meager offerings found good demand.

Soybean markets were generally unchanged. Continued light marketings about offset the bearish influence of a 5¢-per-bushel lower 1962 support price announced this week. Flaxseed weakened in Minneapolis, reflecting a drop on the cash market at Winnipeg and the lower futures market at Minneapolis.

NATIONAL AVERAGE SUPPORT PRICES FOR 1962-CROP FEED GRAINS AND OILSEEDS... were announced this week. The 1962 support prices, with 1961 support prices in parentheses are: Corn - \$1.20 per bushel average for all grades (\$1.20); grain sorghum - \$1.93 per hundredweight for grade No. 2 or better (\$1.93); barley - 93¢ per bushel for grade No. 2 or better (93); oats - 62¢ per bushel for grade No. 3 (62¢); rye - \$1.02 per bushel for grade No. 2 or better, or grading No. 3 on test weight only (\$1.02); soybeans - \$2.25 per bushel average for all grades (\$2.30); and flaxseed - \$2.90 per bushel for grade No. 1 (\$2.80). Support prices reflect approximately 74 percent of January 1962 parity prices for corn, barley and oats, 69 percent of parity for rye, about 78 percent of grain sorghum and soybean parity, and about 76 percent of flaxseed parity.

RECORD 1961 GRAIN INSPECTIONS FOR EXPORT... totaled slightly more than 1.2 billion bushels. This was about 12 percent, or 136.4 million bushels, more than the 1960 total and about 26 percent, or 248.2 million bushels, more than in 1959. A little over half of the 1961 total was wheat. The 639.4 million bushels of wheat inspected for export in 1961 ran about 28 percent larger than in 1960 and almost 80 percent larger than in 1959. Nearly 75 million bushels more corn were inspected for export in 1961 than in 1960. Soybean inspections showed a slight decrease, while inspections of oats, barley and grain sorghums dropped sharply. About 56 percent, or 685.5 million bushels, of the 1961 total was inspected at Gulf ports. Lake ports accounted for about 13 percent of the total; Atlantic and Pacific ports, around 15 percent each. A year earlier, Lake ports accounted for nearly 14 percent of the total; Atlantic ports, 16 percent; and Pacific ports, almost 19 percent. Volume-wise, 1961 inspections for export were nearly 24 percent larger than in 1960 at Gulf ports, 7 percent larger at Atlantic ports, and 8 percent larger at Lake ports, but nearly 10 percent smaller at Pacific ports. Inspections of corn increased in all areas, and wheat inspections were up sharply at Lake and Gulf ports.

<sup>1/</sup> Cash grain closing prices are on-track cash prices established at the close of the market. The terminal rate is used in determining the effective support price for grain in terminal storage or in transit to terminal and for calculating most county support rates. Effective support price is the established terminal support rate for grain received by rail minus the deduction for storage as of the date shown. Terminal price support rates are not established for corn, oats or soybeans at any market, nor for wheat and grain sorghums at Ft. Worth.

<sup>2/</sup> Galveston effective and terminal support price. A terminal support price is not established for Ft. Worth, but the cash price usually is backed by paid-in freight which will carry it to Galveston. Therefore, cash prices at Ft. Worth usually may be compared with effective support price at Galveston.

<sup>3/</sup> Applies only to the varieties Baart and <sup>Burt</sup>Bluestem of the sub-class Hard White.

<sup>4/</sup> The monthly average price is the simple average of the daily closing prices.

## WEEKLY SUMMARY AND STATISTICS

GRAIN DIVISION

AGRICULTURAL MARKETING SERVICE

UNITED STATES DEPARTMENT OF AGRICULTURE

January 19, 1962

Volume 10 No. 3

Washington 25, D. C.

### GRAIN MARKETS MIXED BUT LITTLE CHANGED

Cash grain markets continued to show a mixed trend during the week ended January 18, but prices generally closed little different from a week ago.

Winter wheat markets softened. Although offerings from merchandisers and interior terminals about matched current needs, receipts were not quite as heavy as last week. Selling by farmers was very light. Spring wheat finished on a firm note at Minneapolis, influenced mostly by the higher futures market and partly by increased buying interest for light arrivals. Durum bids, however, were off nominally 15-18¢ per bushel. White wheat firmed up behind improved export demand at Portland. Rye recovered from last week's downturn and firmed up a little at Minneapolis. Rye flour sales, however, remained extremely slow.

Cash corn was mixed -- strong in some markets but weak in others. Liberal offerings were well absorbed in some markets but burdensome in others. Oats lost 1-4¢ per bushel under pressure from the recent overall weakness in feed grains. Barley found improved domestic and export demand and firmed up a little. Grain sorghums advanced 4¢ behind brisk demand at Kansas City but held steady on very light offerings at Ft. Worth.

Soybeans closed on a weak note. Easiness in end products put the cash bean market under mild pressure. Country movement remained light and forced processors and exporters to draw from their accumulated stocks. Flaxseed was unchanged in narrow trading at Minneapolis.

---

Wheat and flour - export transactions by program and country of destination, July 1-December 30, 1961.....	12-15
Feed grains - CCC sales against Certificate Pool.....	16

PRICE SUPPORT ACTIVITIES ... showed that farmers had put 247.4 million bushels of 1961-crop wheat under price support through December 31, 1961. This was about a third less than the same date a year earlier. About 194.5 million bushels were under warehouse-stored loans, 52.5 million under farm-stored loans, and some 450,000 bushels were under purchase agreements. Through December 31, farmers had repaid loans on only 51.4 million bushels, with about 80 percent of these repayments in Kansas, Oklahoma, Texas, and Washington. Farmers also had put nearly 83 million bushels of corn under support -- about 69 million less than a year earlier. About 80 percent of the corn under support was stored on farms. Soybeans put under price support through December 31 totaled almost 93 million bushels, or about 71 million more than a year ago. Of the total, nearly 53 million bushels were under warehouse-stored loans and about 39 million were under farm-stored loans. Farmers had put a little more oats and barley under support than a year ago, but slightly less rye, grain sorghums, and flaxseed. (Details on pages 7-11)

WHEAT AND FLOUR EXPORT TRANSACTIONS ... totaled 353 million bushels the first half of this season -- an increase of 46 million over the same period last year. Of the total, nearly 120 million bushels were "dollar" sales; i.e. sales without assistance other than the Payment-in-Kind Program. European countries accounted for 78 million bushels of the dollar sales, with Netherlands buying 16.6 million, Italy 14.2 million, Germany 13.3 million, United Kingdom 11.1 million, and France 9 million bushels. Other large "cash" buyers were: Japan 19.7 million bushels, Venezuela 6.8 million, and the Philippine Republic 6.1 million. Nearly 184 million bushels of wheat and flour were sold under Title I of Public Law 480. Principal countries were India 34.9 million bushels, U.A.R. 30 million, Turkey 24.3 million, Pakistan 18.3 million, Brazil 16.7 million, and Yugoslavia 11.5 million. Barter program transactions totaled 21 million bushels the first six months, while donations of wheat and flour amounted to 25 million bushels. (Details on pages 12-15)

<sup>1/</sup> Cash grain closing prices are on-track cash prices established at the close of the market. The terminal rate is used in determining the effective support price for grain in terminal storage or in transit to terminal and for calculating most county support rates. Effective support price is the established terminal support rate for grain received by rail minus the deduction for storage as of the date shown. Terminal price support rates are not established for corn, oats or soybeans at any market, nor for wheat and grain sorghums at Ft. Worth.

<sup>2/</sup> Galveston effective and terminal support price. A terminal support price is not established for Ft. Worth, but the cash price usually is backed by paid-in freight which will carry it to Galveston. Therefore, cash prices at Ft. Worth usually may be compared with effective support price at Galveston.

<sup>3/</sup> Applies only to the varieties Baart and Bluestem of the sub-class Hard White.

<sup>4/</sup> The monthly average price is the simple average of the daily closing prices.

## GRAIN MARKETS QUIET

Cash grain prices drifted within narrow bounds in quiet trading during the week ended January 25. At the close, prices were either unchanged or generally no more than 1 or 2¢ per bushel different from a week ago.

Winter wheat finished on a firm note, bolstered mainly by continued light selling in the country, winter weather that interrupted shipments to terminals, and good demand. Trade reports of increased loan applications also had a strengthening influence. Spring wheat found dull demand and prices weakened at Minneapolis, but durum held steady in limited sales. White wheat edged up slightly at Portland on continued light country selling. Rye held firm at Minneapolis despite a lack of any real interest.

Cash corn finished in a firm position. Offerings were fairly liberal and generally met good demand. Some strength stemmed from the stocks report which indicated increased disappearance, particularly in exports. Oats weakened behind lighter demand. Barley prices were generally unchanged but malting type dropped 4¢ per bushel in dull trading at Minneapolis. Grain sorghums held steady with trading light and a fairly even balance between supply and demand.

Soybean markets were quiet and firm. Many traders expressed disappointment over the rate of exports and crushings in view of the large crop this year. A slight rise in oil and meal stocks gave processors little reason to raise bids. Flaxseed recovered an early loss and finished about the same as the previous week at Minneapolis. The early downturn was influenced mainly by the lower futures market at both Minneapolis and Winnipeg.

Grains - CCC-owned stocks by states, January 1.....	8-9
Wheat - CCC-owned stocks by classes, January 1.....	10
Feed grains - CCC sales against Certificate Pool.....	10
Wheat - supply and distribution in four exporting countries.....	11
Corn - receipts by grade at selected markets, December 1961.....	12

FEED GRAIN AND WHEAT STOCKS ... in all positions on January 1 showed declines from a year earlier according to the Crop Reporting Board. Stocks of feed grains -- corn, oats, barley and sorghum grain -- totaled 175 million tons, 4 percent below the previous record January 1 stocks of 182 million tons in 1961. Corn stocks at 4,494 million bushels were 4 percent below the record holdings of a year earlier while sorghum grain at 1,032 bushels was practically the same as the previous January 1. Oats were reduced by 9 percent and barley stocks declined 7 percent. Wheat holdings were the second largest of record but were 3 percent below the record of a year ago. Rye and flaxseed stocks each dropped a sharp 27 percent below a year ago. Soybean stocks were the highest of record for the date -- nearly a fourth larger than last year and a tenth larger than the previous record of January 1, 1959.

CORN STOCKS ... owned by CCC totaled 1.2 billion bushels on January 1 -- a drop of around 230 million from a year ago. The quantity of corn under reseal totaled 386 million at the first of the year as against 223 million a year earlier. CCC sales of corn against pool certificates since the beginning of the program in September totaled 270 million by the end of December with an additional 96 million sold through January 19.

PRICE SUPPORT LOANS ... on 1958-crop farm-stored oats and barley now under reseal will not be extended beyond April 30 maturity date, the USDA announced recently. County ASC committees, as designated and directed by the State ASC committee will be authorized to call reseal loans on 1958-crop barley and oats prior to maturity date in those areas only where supplies of CCC-owned grains stored in country warehouses or bin sites are insufficient to fill sales needs under the livestock feed program. At the end of December, 13,583,922 bushels of 1958-crop barley and 16,333,500 bushels of 1958-crop oats were under reseal. In instances where loans are called early and the barley or oats are delivered in payment of the loan, farmers will receive storage credit for the full year.

<sup>1/</sup> Cash grain closing prices are on-track cash prices established at the close of the market. The terminal rate is used in determining the effective support price for grain in terminal storage or in transit to terminal and for calculating most county support rates. Effective support price is the established terminal support rate for grain received by rail minus the deduction for storage as of the date shown. Terminal price support rates are not established for corn, oats or soybeans at any market, nor for wheat and grain sorghums at Ft. Worth.

<sup>2/</sup> Galveston effective and terminal support price. A terminal support price is not established for Ft. Worth, but the cash price usually is backed by paid-in freight which will carry it to Galveston. Therefore, cash prices at Ft. Worth usually may be compared with effective support price at Galveston.

Burt

<sup>3/</sup> Applies only to the varieties Baart and Bluestem of the sub-class Hard White.

<sup>4/</sup> The monthly average price is the simple average of the daily closing prices.

QUARTERLY  
SUMMARY  
AND  
STATISTICS

GRAIN DIVISION                      AGRICULTURAL MARKETING SERVICE  
UNITED STATES DEPARTMENT OF AGRICULTURE

Volume 5    No. 1

Washington 25, D. C.

January 26, 1962

Grain prices thus far this season have averaged well above last year reflecting in part the good export demand, somewhat smaller supplies and the higher price support rates. Prices in January for wheat, corn, grain sorghums and soybeans were not far different from a year ago with the exception of durum and spring wheat which were sharply higher. Rye, oats, barley and flaxseed sold well above a year earlier during January.

WHEAT ... prices the first half of the season averaged 11¢ per bushel over a year earlier reflecting the good export demand, higher support rate and reduced plantings for the 1962 crop. Winter wheat lost 1-2¢ during January, while spring wheat gained around 1¢ per bushel. Hard winter wheat prices in January were at about last year's level or above, while soft red winter ranged from 3¢ under at Toledo to 10¢ under at St. Louis. White wheat at Portland averaged 8¢ below a year ago. Spring wheat was 23¢ per bushel higher at Minneapolis for ordinary protein while Hard Amber durum was \$1.41 higher than a year earlier. Stocks of wheat in all positions on January 1 totaled about 2 billion bushels or 63 million below a year earlier. Of the total stocks, the Commodity Credit Corporation owned 1.1 billion bushels. An additional 283 million were outstanding under support or resale, leaving around 617 million bushels of "free" wheat -- 43 million more than a year ago. Exports of wheat and flour, July through December, totaled 363 million bushels -- 64 million more than the year before. January 1 wheat supplies for export or carryover in the United States, Canada, Argentina and Australia totaled 2.4 billion bushels, a drop of 470 million from a year ago. A sharp drop in the Canadian crop coupled with much smaller carryover stocks in Argentina and Australia accounted for most of the reduction. Exports from these countries, July through December, totaled around 680 million bushels -- 120 million over last year.

RYE ... averaged 22¢ per bushel higher this January than a year earlier reflecting smaller supplies and higher support rates. Rye stocks of 18.8 million on January 1 were 7.1 million below a year ago. Disappearance of 23.4 million bushels, July through December, was 3.4 million above a year earlier due mainly to heavier feeding. Rye exports of 3.7 million were up by nearly a million while imports of 0.7 million were less than a third those of last year.

CORN ... prices at the farm averaged 4¢ per bushel higher, October through December, compared with the same period a year earlier. Market prices declined around 2¢ per bushel in January and averaged around 2-3¢ below January 1961. Stocks of corn in all positions on January 1 totaled 4.5 billion bushels, 193 million below a year ago. CCC owned over 1.2 billion bushels of the total stocks with an additional 469 million under loan or resale. CCC sales of corn, mainly for redemption of pool certificates totaled 312 million bushels October through December. Disappearance of corn the first quarter totaled a record 1.1 billion bushels -- 131 million more than a year earlier. Record exports of 93 million bushels were 20 million more than last year. With an estimated 169.7 million

grain consuming animal units, up 2 percent from last year, corn fed per animal unit totaled 5.8 bushels the first quarter compared with 5.3 a year earlier and 4.8 the 5-year average.

OATS ... prices at the principal midwest markets in January averaged 6¢ per bushel above a year earlier. However, oats prices at Portland were 9¢ lower. Stocks of 774 million on January 1 were 9 percent smaller than a year ago and 14 percent below average. Disappearance, mainly for feed, July through December totaled 563 million -- slightly less than last season. Exports of 7 million were less than half those of a year earlier. Supplies of oats in Canada for 1961-62 were the smallest in 10 years and totaled 428 million as against 549 million a year earlier.

BARLEY ... prices at the farm averaged 15¢ per bushel higher the first half this season than for the same period last season. Market prices in January continued well above a year ago with malting barley at Minneapolis 35¢ higher and feeding varieties around 17¢ per bushel higher than a year ago. Stocks in all positions January 1 totaled 333 million bushels, 7 percent below January 1, 1961. Disappearance of 223 million bushels the first half of the season was 25 million below last season due mainly to smaller exports. Exports of 23 million were the smallest since 1954-55 and only about half those of last season. Supplies of barley in Canada for 1961-62 were the smallest in 10 years and totaled 229 million -- a drop of 100 million from those for 1960-61.

GRAIN SORGHUMS ... prices at the farm averaged \$1.63 per cwt. October through December, an increase of 21¢ over the same months a year earlier. Market prices in January were generally well above a year ago except at Ft. Worth where the prices were at about the same level. Stocks of 578 million cwt. were about the same as last year. Of the total stocks, CCC owned 338 million cwt. with an additional 82 million under loan or resale. October-December disappearance of 85.2 million cwt. was down 10 percent from last season with both exports and feeding smaller.

SOYBEAN ... prices at the farm, October through December, averaged \$2.26 per bushel -- 30¢ more than for the same months last season. A year ago prices advanced sharply in January. This year they were about steady during that month. As a result January prices were at about the same level as a year earlier. Stocks of 525 million bushels in all positions on January 1 were the highest of record -- nearly a fourth larger than last year. Exports of 60 million were 3 million above last year while crushings of 114 million were also 3 million larger. Through December 31, farmers put 93 million bushels of 1961-crop soybeans under price support.

FLAXSEED ... averaged \$3.46 per bushel at Minneapolis during January compared with \$2.86 a year earlier. The higher prices reflect the smallest stocks since 1947, which on January 1, 1962, totaled 15.7 million bushels as against 21.4 million a year earlier. Exports, July through December, of less than a million bushels were a third lower compared with a year ago. However, crushings of 10.5 million for the same period were slightly higher. Supplies of flaxseed in Canada for 1961-62 totaled 22.8 million bushels, the smallest in five years.

NOTE: Data on stocks, production and seed usage from Crop Reporting Board; imports, exports and quantity of wheat, rye, soybeans, and flaxseed processed from Census Bureau; and alcohol usage from Internal Revenue Service. October-December 1961 data partly estimated.

1/ Owned and stored in bins or other storage owned or controlled by CCC. Additional CCC-owned grain is included in other positions.

2/ All off-farm storages not otherwise designated.

3/ Does not include Canadian wheat milled in bond, but includes about 10,000,000 bushels of wheat used annually for breakfast food.

4/ Mostly quantity fed, but includes industrial use, waste, loss, and statistical errors in estimates.

Season.:	:		:		:		:	

1/ Owned and stored in bins or other storage owned or controlled by CCC. Additional CCC-owned grain is included in other positions.

2/ All off-farm storages not otherwise designated.

3/ Mostly quantity fed, but includes oats for oatmeal currently estimated at 42 million bushels annually. Also includes waste, loss, and statistical errors in estimates.

WEEKLY  
SUMMARY  
AND  
STATISTICS

GRAIN DIVISION

AGRICULTURAL MARKETING SERVICE

UNITED STATES DEPARTMENT OF AGRICULTURE

Volume 10 No. 5

Washington 25, D. C.

February 2, 1962

## MOST GRAIN PRICES STRENGTHEN

Cash grain prices generally edged a little higher during the week ended February 1. Trading was more active, too.

Winter wheat finished unchanged to 3¢ per bushel higher. Light offerings by farmers and merchandisers failed to satisfy good mill and export demand. Spring wheat, bolstered by some mill buying, moved up 1-2¢ but durum held steady on light receipts at Minneapolis. White wheat, on the other hand, declined 1-2¢ despite larger export sales at Portland. Rye found better demand and prices moved up 2¢ at Minneapolis.

Firmness in corn was attributed mainly to good demand for liberal spot offerings at most markets. However, demand was dull at Chicago and most arrivals were applied on previous contracts. Oats held firm, supported by light offerings and strength in corn. Barley was generally unchanged but malting type weakened in dull trading at Minneapolis. Grain sorghums were mixed -- up 2¢ per cwt. in Ft. Worth but down 2¢ in Kansas City. Offerings picked up but demand was good.

Soybean markets generally held firm as there was little in the news to influence prices. Buyers did, however, up their bids 4¢ per bushel at Minneapolis in order to get enough soybeans to satisfy their requirements. Farmers continued to limit their selling. Action of end products was quiet and gave no support to the market. Flaxseed advanced 5¢ at Minneapolis in response to stronger prices at Winnipeg and in futures trading at Minneapolis.

Feed grains - payment-in-kind export bids.....	12

SOYBEAN PRICE-SUPPORT LOAN PERIOD ... has been extended two months in areas where weather had delayed the harvest. Final date for producers to take out price-support loans and purchase agreements on 1961 production will be extended from January 31 to March 31 in areas designated by State ASC Committees. Price-support loans and purchase agreements on 1961-crop soybeans mature May 31.

SIGN-UP FOR 1962 FEED GRAIN PROGRAM ... begins February 5. Meetings to launch the sign-up are scheduled in three areas -- in Omaha on February 5, in Atlanta on February 8, and in Spokane on February 12. Farmers who voluntarily take part in the 1962 program for corn and grain sorghums, and for spring-planted barley can sign up at their County ASCS office between February 5 and March 30. This also will be the sign-up period for spring-planted wheat under the 1962 Wheat Stabilization Program. Sign-up for 1962-crop winter barley was held last fall. Except for addition of barley, 1962 program is little changed from 1961.

HYBRID CORN AND GRAIN SORGHUM SEED DIVERSION PROGRAM ... announced this week will lessen the adverse economic situation for seed processors caused by the late development of the 1961 Feed Grain Program. Diversion payments will be \$1.50 per bushel for hybrid seed corn and \$1.20 per bushel for hybrid grain sorghum seed diverted to nonseed uses. Payment on the quantity each participant can divert will be made upon proof of diversion by the processor. Diversion may take place any time prior to June 30, 1962.

Sales of Commodity Credit Corporation-owned grain represent certificates issued to producers under the 1961 Feed Grain Program. Sales of grain sorghums began in July, barley and corn in September, and oats in November.

Cash grain closing prices compared with support price at principal terminals <sup>1/</sup>  
All prices rounded to nearest cent per bushel except grain sorghums per cwt.

<sup>1/</sup> Cash grain closing prices are on-track cash prices established at the close of the market. The terminal rate is used in determining the effective support price for grain in terminal storage or in transit to terminal and for calculating most county support rates. Effective support price is the established terminal support rate for grain received by rail minus the deduction for storage as of the date shown. Terminal price support rates are not established for corn, oats or soybeans at any market, nor for wheat and grain sorghums at Ft. Worth.

<sup>2/</sup> Galveston effective and terminal support price. A terminal support price is not established for Ft. Worth, but the cash price usually is backed by paid-in freight which will carry it to Galveston. Therefore, cash prices at Ft. Worth usually may be compared with effective support price at Galveston.

<sup>3/</sup> Applies only to the varieties Baaft and Bluestem of the sub-class Hard White.

<sup>4/</sup> The monthly average price is the simple average of the daily closing prices.

February 9, 1962

## GRAIN MARKETS MIXED BUT LITTLE CHANGED

Cash grain markets showed a mixed trend for the week ended February 8, but prices were generally not much different from the previous week's close.

Winter wheat was about unchanged. Mill and export demand was good, but farmers maintained a tight selling policy and trading was held in check by small offerings. Exporters were particularly active in hard wheat with Gulf billing in the Southwest but showed little interest in soft red wheat in the Midwest. Spring wheat lost 2-3¢ per bushel in Minneapolis as slow flour sales and lower millfeed prices discouraged buying. Durum wheat, however, held steady as receipts continued very light and semolina sales picked up a little. White wheat was down 1-2¢ at Portland. Export sales remained good, but buyers were influenced by adequate supplies at terminals and the outlook for restricted future export trade in white wheat. Rye went down 4¢ at Minneapolis, reflecting slightly larger receipts, slow rye flour sales, and a lack of buying interest in futures market.

Corn prices closed on a weak note as offerings remained plentiful in view of more limited domestic and export demand. Oats trading was quiet and prices softened along with corn. Barley held steady. Trading was slow with lighter offerings about matching the daily demand. Grain sorghums ruled firm behind good demand.

Soybeans were unchanged in dull trading at most markets but lost 3¢ at Minneapolis. Movement of beans from the country remained extremely slow, but buying was tempered to some extent by weakness of end products and considerable trade talk about processing plants closing due to unfavorable conversion. Flaxseed advanced 5¢ at Minneapolis.

DETAILS OF FEED GRAIN PRICE-SUPPORT PROGRAMS ... were announced recently. Corn and grain sorghum producers will be eligible for support if they reduce their corn and grain sorghum acreage by a minimum of 20 percent and do not exceed their base acreage (1959-60 average) of barley. Barley producers will be eligible for barley support if they reduce their barley acreage by the minimum 20 percent and do not exceed their base acreage of corn and grain sorghum. The required reduction does not apply to qualified malting barley producers. Participation in the 1962 Feed Grain Program will not be a condition of eligibility for 1962-crop oats and rye price support. Price support on barley, grain sorghum, oats and rye will be available from harvest time through January 31, 1963 and on corn through May 31, 1963. Loans in most states will mature on March 31, 1963 for grain sorghum, on April 30, 1963 for barley, oats and rye, and on July 31, 1963 for corn.

THREE ADDITIONAL BARLEY VARIETIES EXCEPTED UNDER 1962 FEED PROGRAM ... recently include Larker, Trophy, and Compana. This increases the list of varieties for exemption under malting barley provisions of the 1962 Program from 21 to 24 varieties. States in which producers can grow Larker and Trophy and be exempt from the 1962 Feed Grain Program are: California, Colorado, Idaho, Illinois, Iowa, Michigan, Minnesota, Montana, North Dakota, Nebraska, Oregon, South Dakota, Washington and Wisconsin. Compana variety is limited to Montana -- the only state in which it is widely grown.

BROAD RESEAL PROGRAM ... under which producers can continue price-support loans on farm-stored corn, wheat, grain sorghum, oats, barley, and soybeans after loan maturity dates this spring and summer and earn storage payments was announced recently. The 2-year reseal program initiated last year will be continued for 1961-crop corn and wheat. Under this provision, producers can reseal their farm-stored corn and wheat for a 2-year period without a yearly renewal of the loan. In addition, 1961-crop barley, oats, grain sorghum, and soybeans under farm-stored price-support loans may be resealed and loans extended for a year following maturity dates. Soybeans are being included in the reseal program for the first time since the 1959 program on 1958-crop soybeans. Resealed loans on 1960-crop barley and oats, 1959-crop barley (on a limited basis), corn, and wheat, and 1958-crop corn are being extended for another year. Resealed loans on 1960-crop wheat, corn and grain sorghum will run for another year under the 2-year program.

<sup>1/</sup> Cash grain closing prices are on-track cash prices established at the close of the market. The terminal rate is used in determining the effective support price for grain in terminal storage or in transit to terminal and for calculating most county support rates. Effective support price is the established terminal support rate for grain received by rail minus the deduction for storage as of the date shown. Terminal price support rates are not established for corn, oats or soybeans at any market, nor for wheat and grain sorghums at Ft. Worth.

<sup>2/</sup> Galveston effective and terminal support price. A terminal support price is not established for Ft. Worth, but the cash price usually is backed by paid-in freight which will carry it to Galveston. Therefore, cash prices at Ft. Worth usually may be compared with effective support price at Galveston.

<sup>3/</sup> Applies only to the varieties Burt and Bluestem of the sub-class Hard White.

<sup>4/</sup> The monthly average price is the simple average of the daily closing prices.

Based on weekly reports of inspections for export by licensed grain inspectors and does not include rail or truck movement to Canada or Mexico. In some cases, the ultimate destination of the grain exported is not shown on the inspection reports. Therefore, the quantity for each country may vary from official Census data which are based on custom declarations.

## GRAIN MARKETS QUIET WITH MINOR PRICE CHANGES

Cash grain markets were quiet during the week ended February 15, with prices generally fluctuating within narrow ranges. Wheat and grain sorghums were steady to firm while other grains closed on the weak side.

Winter wheat closed steady to fractionally lower. Good demand from mills, exporters and merchandisers absorbed most offerings. Country selling of high protein wheat increased since prices were well above net loan returns. The market for Soft Red wheat was dull. Spring wheat prices gained 1¢ as light offerings met a fair demand. Durum wheat lost 15¢ as demand slackened for limited supplies. White wheat markets were weak with limited export business and light country offerings. Prices were unchanged to 1¢ lower at Portland. Rye markets were steady with little interest in light offerings.

Corn markets were steady to weak with prices unchanged to 2¢ per bushel lower. Offerings were lighter with a continued good export demand. Oats weakened with prices 1-3¢ lower as demand slacked off for light receipts. Barley was steady on the West Coast but lost ground in the Midwest. Malting barley closed 2¢ lower at Minneapolis. Grain sorghums gained 2¢ per cwt. with a good demand for light offerings.

Soybean markets continued on the weak side with prices unchanged to 1¢ per bushel lower. Small country selling and some improvement in the rate of exports were supporting factors while slow markets for meal and oil weighted on the negative side. Soybean processing margins continued unsatisfactory. Flaxseed lost 5¢ per bushel in dull trading with lower futures markets at both Minneapolis and Winnipeg.

## Special Features

	<u>Page</u>
Feed grains - payment-in-kind export bids.....	2
Barley, barley malt, oats, rye and flaxseed - U. S. exports by country of destination, July-December.....	7

Wheat flour - U. S. exports by customs districts, July-December.....	10-13
Wheat and flour - export program rates.....	14
Soybeans - inspected receipts by grades.....	15
Soybean prices compared with soybean oil and meal prices.....	15
Feed grains - CCC sales against Certificate Pool.....	16

WHEAT AND FLOUR EXPORTS ... totaled 367 million bushels the first half of the 1961-62 season as against 298 million the same period a year earlier. The record exports reflect heavier shipments to most European countries, South America, Africa and a number of countries in Asia. Sharp increase in exports to Turkey, Yugoslavia The Netherlands, Germany, Spain and Italy more than offset the loss to Poland. Exports to Brazil increased by nearly 24 million bushels with smaller increases to Venezuela, Peru, Chile and Paraguay. Increases in exports to Morroco, Algeria and Tunisia were each over 6 million bushels. Exports to Japan, Egypt and Pakistan continued high but those to India dropped from 81 million last season to 46 million the first half of this season.

Of the total exports this season flour accounted for 47.6 million -- a drop of around one million bushels in grain equivalent. Of the flour exports 15.5 million were shipped under various relief programs with shipments to Italy, Egypt, Yugoslavia and Greece accounting for about half of the total.

Of the total wheat (grain only) exports of 320 million, 60 percent or 191 million bushels were Hard Red Winter -- nearly 60 million more than the year before. Exports of White wheat totaled 66.6 million - about the same as last year. Soft Red Winter wheat exports were down by around 6 million bushels, while Hard Red Spring exports were up by the same amount the first half of the season. Over 14 million bushels of durum wheat were exported as against none the year before. (For details by country and flour exports by custom districts see pages 8-13).

1/ Cash grain closing prices are on-track cash prices established at the close of the market. The terminal rate is used in determining the effective support price for grain in terminal storage or in transit to terminal and for calculating most county support rates. Effective support price is the established terminal support rate for grain received by rail minus the deduction for storage as of the date shown. Terminal price support rates are not established for corn, oats or soybeans at any market, nor for wheat and grain sorghums at Ft. Worth.

2/ Galveston effective and terminal support price. A terminal support price is not established for Ft. Worth, but the cash price usually is backed by paid-in freight which will carry it to Galveston. Therefore, cash prices at Ft. Worth usually may be compared with effective support price at Galveston.

3/ Applies only to the varieties Burt and Bluestem of the sub-class Hard White.

4/ The monthly average price is the simple average of the daily closing prices.

1/ Carlot receipts have been converted to bushels on the basis that 1 carlot equals 1,800 bushels. --

2/ Of the December receipts, 5,100 bushels were Black, and the remainder Yellow soybeans. Inspections of soybeans in December included 5,392,000 bushels as cargo lots, 3,005,155 bushels as truck receipts, and the balance as carlot receipts. Based on reports of inspections by licensed grain inspectors at all markets.

Soybean prices compred with market value of soybean oil and soybean meal

Month	: Soybean oil Value Average price at crushing plant	: Soybean meal Value Bulk price at Decatur	: Value from bu. of soy- beans 1/ Dollars per ton	: Value from bu. of soy- beans 1/ Dollars per ton	: Value of oil and meal from bushel of soybeans 1/ Dollars	: Market Price No. 1 Yellow soybeans Ill. Pts. Dollars per bu.	: Spread between soybean price and value of oil and meal Cents
January 1962	10.4	1.14	59.75	1.40	2.54	2.40	14
December 1961	10.4	1.14	59.60	1.40	2.54	2.40	14
November 1961....	10.4	1.14	59.70	1.40	2.54	2.38	16

February 23, 1962

## GRAIN MARKETS SOFTEN

Most cash grain prices were unchanged or lower for the holiday-shortened week ending February 21. Spring wheat -- the exception -- held firm. Trading was generally slow.

Hard winter wheat was mostly unchanged but soft winter wheat declined 1-3¢ per bushel. Hard wheat markets drew support from good mill and export demand. Receipts were light, however, as country selling tightened up. Spring wheat edged up a little on the high end of the price range at Minneapolis, but durum wheat dropped 30¢ per bushel. Spring wheat flour business was draggy. Durum wheat found demand almost entirely lacking. White wheat was about unchanged at Portland. Offerings were lighter but so were export workings. Rye lost 3¢ at Minneapolis as domestic rye flour trade was slow and export business failed to develop.

Corn prices weakened with supplies fully adequate for current demand. Oats softened in light trading. Barley was unchanged to 3¢ per bushel lower with slow domestic and export demand. Grain sorghum prices showed a weaker tendency in quiet trading.

Soybeans lost 3-4¢ per bushel at principal markets. Although January crushings of soybeans reached a record high of almost 41 million bushels, soybean buyers were discouraged by such factors as lower than expected exports of beans, accumulations of oil stocks, and the February slump in demand for soybean meal. Flaxseed remained unchanged at Minneapolis.

DETAILS OF SOYBEAN AND FLAXSEED SUPPORT PROGRAM ... were announced this week. Loans and purchase agreements on soybeans will be available from harvest time through January 31, 1963. Loans and purchase agreements on flaxseed will be available through October 31, 1962 in Arizona and California and through January 31, 1963 in all other states. Direct purchases, if needed, will be made on flaxseed through July 31, 1962 in designated Texas counties. Maturity dates for soybean loans on the 1962 crop will be May 31, 1962. Loans on flaxseed will mature on January 31, 1963 in Arizona and California and on March 31, 1963 in all other states. Support prices were announced January 9 at national averages of \$2.25 per bushel for soybeans and \$2.90 per bushel for grade No. 1 flaxseed. To be eligible for support, soybeans must grade No. 4 or better and contain not more than 14 percent moisture and flaxseed must grade No. 1 or better. Also, both must be adequately stored. In addition, soybeans must be grown on a farm where 1959-60 average acreage of conserving and idle land has been maintained. County support rates, with premiums and discounts for grade and quality differences, for soybeans and flaxseed, and terminal support rates for flaxseed will be announced later.

<sup>1/</sup> Cash grain closing prices are on-track cash prices established at the close of the market. The terminal rate is used in determining the effective support price for grain in terminal storage or in transit to terminal and for calculating most county support rates. Effective support price is the established terminal support rate for grain received by rail minus the deduction for storage as of the date shown. Terminal price support rates are not established for corn, oats or soybeans at any market, nor for wheat and grain sorghums at Ft. Worth.

<sup>2/</sup> Galveston effective and terminal support price. A terminal support price is not established for Ft. Worth, but the cash price usually is backed by paid-in freight which will carry it to Galveston. Therefore, cash prices at Ft. Worth usually may be compared with effective support price at Galveston.

<sup>3/</sup> Applies only to the varieties Baart and Bluestem of the sub-class Hard White.

<sup>4/</sup> The monthly average price is the simple average of the daily closing prices.

## GRAIN MARKETS LITTLE CHANGED

Cash grain prices were mixed but for the most part moved within a narrow range during the week ended March 1. Trading was quiet.

Winter wheat finished unchanged to mostly 1 or 2¢ per bushel higher, bolstered mainly by good milling and export demand. Offerings were light and failed to satisfy demand. Farmers continued to show little inclination to sell. Spring and durum wheat held firm on light receipts at Minneapolis. White wheat also remained firm at Portland where country selling and new export business both continued light. Rye edged up 2¢ at Minneapolis, reflecting light receipts and higher futures prices.

Corn prices firmed up a little at most markets. Demand was fairly aggressive but supplies were fully adequate. Strength was credited mostly to short covering in the futures. Sign-up of 3.5 million acres of corn and grain sorghum land into the current feed grain program seemed to have little effect on the market. Oats went up 3-4¢ per bushel on meager offerings as buyers raised their bids in an effort to draw out additional supplies. Barley was unchanged to 3¢ lower as both domestic and export demand slowed. Grain sorghum prices were unchanged in generally dull trading.

Soybeans finished a little firmer, supported mainly by continued light selling in the country and a late-week upturn in meal prices. Demand was good despite the lower oil market. Export inspections declined this week and the report on soybeans under price support was disappointing from a speculative standpoint. Flaxseed was unchanged at Minneapolis. Except for higher futures prices, news in flaxseed was practically nil.

Grains - amount under price support.....	16

PRICE SUPPORT ACTIVITIES ... in January saw farmers put 204.4 million bushels of corn under price support. This brought the total 1961-crop corn put under support as of January 31 to 287.3 million bushels. About 376 million bushels had been put under support the same date a year earlier. Of the corn under support on January 31, 1962 about 255 million bushels were under farm-stored loans, 28 million under warehouse-stored loans, and 4 million bushels were under purchase agreements. Farmers also put 25.6 million bushels of soybeans under price support last month, bringing the total 1961-crop soybeans under loans and purchase agreements to 118.5 million bushels. This compares with only 25.3 million bushels of soybeans under price support on January 31, 1961. About 42 percent of the soybeans were under farm-stored loans and about half under warehouse-stored loans, with only a little over 10 million bushels under purchase agreements. Of the 266.8 million bushels of 1961-crop wheat put under price support through January 31, farmers had repaid loans on 66.6 million bushels. About 70 percent of these repayments were in three states -- Kansas, Oklahoma, and Texas. Farmers also had repaid loans on almost 15.7 million bushels of the 43.5 million bushels of barley they had put under price support through January 31. More oats but less rye, barley, grain sorghums, and flaxseed had been put under support as of January 31, 1962 than a year earlier. (See details on pp. 8-16.)

FIRST FEED GRAIN SIGN-UP REPORT ... under the 1962 program showed that 168,468 farms had signed up through February 15 to divert 3,522,500 acres from corn and grain sorghum production this year. Diversion is from base acreages (1959-60 average plantings) of 6,833,100 acres on these farms. About 3,017,900 acres of corn, or 52 percent, of the base acreage of 5,769,400 acres on signed farms will be diverted. For grain sorghum, 504,200 acres, or about 47 percent, of the base acreage of 1,063,700 acres on signed farms will be diverted.

WHEAT SIGN-UP ... under the 1962 program showed that through February 15 718,870 farms had been signed to divert 11,916,200 acres, or about 33 percent of the 36.2 million program acres on signed farms, from wheat production to conserving practices this year. This includes spring wheat sign-up through February 15, 1962, and winter wheat sign-up which ended December 1, 1961.

<sup>1/</sup> Cash grain closing prices are on-track cash prices established at the close of the market. The terminal rate is used in determining the effective support price for grain in terminal storage or in transit to terminal and for calculating most county support rates. Effective support price is the established terminal support rate for grain received by rail minus the deduction for storage as of the date shown. Terminal price support rates are not established for corn, oats or soybeans at any market, nor for wheat and grain sorghums at Ft. Worth.

<sup>2/</sup> Galveston effective and terminal support price. A terminal support price is not established for Ft. Worth, but the cash price usually is backed by paid-in freight which will carry it to Galveston. Therefore, cash prices at Ft. Worth usually may be compared with effective support price at Galveston.

<sup>3/</sup> Applies only to the varieties Baart <sup>Burt</sup> and Bluestem of the sub-class Hard White.

<sup>4/</sup> The monthly average price is the simple average of the daily closing prices.

## GRAIN MARKETS STRENGTHEN

Soybeans led the stronger trend for most cash grain prices during the week ended March 8. Offerings remained generally light.

Winter wheat closed unchanged to 4¢ per bushel higher. Selling by farmers picked up a little, reflecting the more favorable relationship between cash and effective support prices. Offerings, however, fell short of good mill and export demand. Spring wheat held firm but durum was nominally 20-25¢ per bushel higher at Minneapolis. Modest shipments of spring wheat from the country helped to stabilize the market, but mills hesitated to advance bids since they were getting enough wheat to cover the scanty volume of flour that was traded. White wheat ruled firm behind improved export interest at Portland. Rye prices were firm in dull trading at Minneapolis.

Corn finished unchanged to 4¢ per bushel higher at principal markets. Demand was good but trading was confined to rather narrow channels by lighter offerings. Oats edged up 1-3¢ as meager offerings found improved demand. Barley held generally steady in limited trading. Grain sorghum prices were unchanged at Fort Worth but dropped 1-4¢ per cwt. at Kansas City. Trading was quiet and buyers showed only moderate interest.

Soybean prices went up 4-6¢ per bushel. Trading became more active, influenced to a large extent by a sharp increase in export inspections -- 3.7 million bushels this week compared with 1.6 million last week. Reports of additional barge loading scheduled in Chicago also gave support to the market. Higher soybean prices, however, are reported to be bringing out more offerings. Flaxseed found limited demand and held steady at Minneapolis.

BARLEY ACREAGE DIVERSION ... under the 1962 feed grain program totaled 1.3 million acres through February 15. Fifty-five thousand 705 barley-producing farms had been signed to divert 1,251,900 acres, or about 49 percent of the 2,580,200 base acres on signed farms. These are cumulative figures and include spring-planted barley acreage signed through February 15, 1962, and fall-seeded barley acreage signed during October-November 1961.

ROLLED WHEAT ... is being made available for donation to needy persons abroad including foreign school lunch programs, through U. S. voluntary welfare agencies under the Food for Peace program. USDA announced this week that as with domestic distribution, the rolled wheat for foreign use will be purchased with wheat payment-in-kind certificates. Thus, the use of export certificates -- which are negotiable and eventually must be redeemed in CCC-owned wheat -- will encourage movement out of CCC inventory. Wheat obtained from redemption of Payment-in-Kind certificates must be exported. Details of purchases of rolled wheat for foreign donation will be announced later and will depend on quantities requested by voluntary agencies.

1/ Cash grain closing prices are on-track cash prices established at the close of the market. The terminal rate is used in determining the effective support price for grain in terminal storage or in transit to terminal and for calculating most county support rates. Effective support price is the established terminal support rate for grain received by rail minus the deduction for storage as of the date shown. Terminal price support rates are not established for corn, oats or soybeans at any market, nor for wheat and grain sorghums at Ft. Worth.

2/ Galveston effective and terminal support price. A terminal support price is not established for Ft. Worth, but the cash price usually is backed by paid-in freight which will carry it to Galveston. Therefore, cash prices at Ft. Worth usually may be compared with effective support price at Galveston.

3/ Applies only to the varieties Burt and Bluestem of the sub-class Hard White.

4/ The monthly average price is the simple average of the daily closing prices.

Based on weekly reports of inspections for export by licensed grain inspectors and does not include rail or truck movement to Canada or Mexico. In some cases, the ultimate destination of the grain exported is not shown on the inspection reports. Therefore, the quantity for each country may vary from official Census data which are based on custom declarations.

Based on weekly reports of inspections for export by licensed grain inspectors and does not include rail and truck movement to Canada or Mexico.

Soybean prices compared with market value of soybean oil and soybean meal

Month	Soybean oil		Soybean meal		Value of: Market		Spread
	Value		Value		oil and	Price	between
	Average	from bu.	Bulk	from bu.	meal from	No. 1	soybean
	price at	of soy-	price	of soy-	bushel of	Yellow	price and
	crushing	beans	at	beans	soybeans	soybeans	value of oil
	plant	1/	Decatur	1/	1/	Ill. Pts.	and meal
	Cts. per		Dollars			Dollars	
	pound	Dollars	per ton	Dollars	Dollars	per bu.	Cents
February 1962...	10.2	1.12	57.80	1.36	2.48	2.40	8
January 1962....	10.4	1.14	59.75	1.40	2.54	2.40	14
December 1961...	10.4	1.14	59.60	1.40	2.54	2.40	14
November 1961...	10.4	1.14	59.70	1.40	2.54	2.38	16
October 1961....	10.6	1.17	55.55	1.31	2.48	2.33	15
February 1961...	12.1	1.33	61.50	1.45	2.78	2.66	12

1/ Based on assumption that a bushel of soybeans yields 11.0 pounds of oil and 47.0 pounds of meal.

NOTE: This table is for statistical comparison only. It does not reflect actual operating margins since prices are simple averages and do not take into account location differentials or actual purchases and sales of soybeans, soybean oil or soybean meal.

Soybeans and Flaxseed: Supply and distribution

UNITED STATES DEPARTMENT OF AGRICULTURE

Volume 10 No. 11

Washington 25, D. C.

March 16, 1962

## GRAIN MARKETS LITTLE CHANGED

Most cash grain prices held firm in quiet trading during the week ended March 15. Oilseeds, however, closed a little higher.

Winter wheat finished unchanged in the hard wheat area but edged up 1-2¢ per bushel in the soft wheat area. Demand was good, particularly from exporters. Offerings from interior points in the Southwest picked up slightly. Redemptions of wheat under loan also increased as the March 31 deadline drew nearer. Spring wheat prices softened while durum was nominally unchanged to 5¢ higher at Minneapolis. Demand was fairly good for the small offerings of spring wheat, but flour business was very quiet and export interest was dull. White wheat held steady at Portland as current buying interest barely absorbed moderate offerings. Rye declined 2¢ at Minneapolis as buyers showed very little interest in view of extremely slow rye flour trade.

Corn prices were unchanged to 2¢ higher as relatively light offerings found ready outlets. Chicago had large stocks of "free" corn but most of these were being held for future commitments and opening of navigation. Oats lost 3-4¢ per bushel behind increased offerings at Minneapolis, but held firm on light receipts elsewhere.

Barley found a firmer market on renewed export interest. Grain sorghums were unchanged to a little easier with not much buying interest at present.

Soybeans went up 2-3¢ per bushel as selling by farmers continued light. Export inspections were down, but Chicago continued to report sizable movement by barge. Flaxseed advanced 5¢ per bushel at Minneapolis, reflecting an advance in futures prices which was based on intentions of Canadian farmers to plant less flax next spring.

DETAILS OF WHEAT SEDIMENTATION TEST FOR 1962 WHEAT SUPPORT ... were announced this week. Because it may be difficult for the storage industry to shift to the sedimentation test for determining hard red spring, hard red winter and hard white wheat quality this year, warehousemen will be offered the option of delivering price-support take-over wheat to CCC on the basis of either sedimentation or protein tests. Schedule of premiums for wheat sedimentation values under the wheat price-support program has been modified from that announced last September 19. Premiums generally will go up 1¢ per point of sedimentation value instead of in brackets of 5 points as under the previously announced schedule. The revised schedule provides a premium of 3¢ per bushel for wheats testing 40, 41 and 42; the same as under the previous schedule. However, for wheat testing higher, the premium will be 1¢ per bushel for each additional point of sedimentation value up to a maximum of 25¢ per bushel which will apply to wheats with a sedimentation test of 64 or above.

MAXIMUM MOISTURE LIMITATIONS FOR EAR CORN ... under 1961 price-support provisions have been relaxed for March and April. Ear corn will be eligible for price-support loans with 21 percent moisture or less if tested in March and 19 percent or less if tested in April. Moisture limitations are being relaxed because the unusually wet fall and winter in many Midwest areas has prevented ear corn from drying as rapidly as it normally does. Under previous requirements, ear corn to be eligible for support could not contain more than 19.5 percent moisture if tested in March or more than 18 percent moisture if tested in April. No change is being made in the 16 percent moisture limitation for ear corn if tested for support in May.

<sup>1/</sup> Cash grain closing prices are on-track cash prices established at the close of the market. The terminal rate is used in determining the effective support price for grain in terminal storage or in transit to terminal and for calculating most county support rates. Effective support price is the established terminal support rate for grain received by rail minus the deduction for storage as of the date shown. Terminal price support rates are not established for corn, oats or soybeans at any market, nor for wheat and grain sorghums at Ft. Worth.

<sup>2/</sup> Galveston effective and terminal support price. A terminal support price is not established for Ft. Worth, but the cash price usually is backed by paid-in freight which will carry it to Galveston. Therefore, cash prices at Ft. Worth usually may be compared with effective support price at Galveston.

<sup>3/</sup> Applies only to the varieties Baart <sup>Burt</sup> and Bluestem of the sub-class Hard White.

<sup>4/</sup> The monthly average price is the simple average of the daily closing prices.

Volume 10 No. 12

Washington 25, D. C.

March 23, 1962

## GRAIN MARKETS MIXED

Cash grain markets showed a mixed trend during the week ending March 22. Price wise, however, corn and flaxseed were the only grains that changed materially from the previous week's close.

Winter wheat finished on a weak note in the hard wheat area but held firm in the soft wheat area. Offerings by southwest producers became more liberal. Demand slacked off but was still good for certain types and proteins. Some mills in the Kansas City trade area were reported facing a tight storage situation. Other buyers were holding off in the belief that the current relationship between cash and effective support prices would spur selling by farmers before the end of the month. Spring wheat declined 2-3¢ per bushel but durum held steady at Minneapolis. Offerings were light but so was demand. White wheat held firm at Portland as offerings by farmers were relatively small and export interest continued fair. Rye was down 2¢ as slightly larger receipts met dull mill and export demand at Minneapolis.

Cash corn finished 1-4¢ per bushel higher in a rather tight market. Stocks of "free" corn are large, but current offerings were light and failed to fully satisfy good demand. Farmers and merchandisers both are reported to be holding for higher prices. Oats ruled firm with supply and demand in fairly good balance. Barley prices softened behind slower demand. Grain sorghums were unchanged at Ft. Worth but declined 2-4¢ per cwt. at Kansas City in very limited trading.

Soybean prices closed on a weak note despite strong oil and meal markets. Export business was considered satisfactory by the trade, but overall demand was a little slower. Flaxseed advanced 7¢ per bushel at Minneapolis. Trade attributed strength to higher futures prices and political unrest in Argentina which may prevent shipments of flaxseed from that country to world markets.

### Special Features

	<u>Page</u>
Feed grains - payment-in-kind export bids.....	7
Feed grains - CCC sales against Certificate Pool.....	7
Wheat, rye, corn, oats, barley, grain sorghums, soybeans and flaxseed - amount put under price support and outstanding by states.....	8-15
Grains - amount under price support.....	16

PRICE SUPPORT ACTIVITIES ... through February 28 showed that farmers had put 412.2 million bushels of 1961-crop corn under price-support loans and purchase agreements. This compares with 475.6 million bushels put under support a year earlier. Of the 1961-crop corn put under support, 39.5 million bushels were under warehouse-stored loans, 365.7 million under farm-stored loans, and almost 7 million under purchase agreement. Farmers also had put 131.3 million bushels of 1961-crop soybeans under price support through February 28. Of these, about 60 million bushels were under loan in warehouses and 54 million in farm storage. Quantities of other grains put under support through February were little changed from January figures since the final date for putting them under support has passed. Of the 271.2 million bushels of 1961-crop wheat which farmers had put under support through February, loans had been repaid on 81.3 million bushels. Two-thirds of the repayments were in three states -- Kansas, Oklahoma and Texas. Loans also had been repaid on 20.4 million bushels of barley, 5.7 million bushels of soybeans, 4.3 million bushels of oats, and 1.1 million bushels of corn. (See details in tables on pages 8-16.)

ACREAGE DIVERSION SIGN-UP ... under the 1962 Wheat and Feed Grain Programs through March 8 showed that farmers will divert 12.2 million acres of wheat, 1.7 million acres of barley, 9.8 million acres of corn, and 2.5 million acres of grain sorghum land to conserving practices. Sign-up represents about 32 percent of wheat program acres, 42 percent of barley base acres, about 47 percent of corn base acreage, and 44 percent of grain sorghum base acres on signed farms.

NEW INTERNATIONAL WHEAT AGREEMENT ... negotiated at Geneva recently increases the basic maximum and minimum prices 12 1/2¢ per bushel, i.e., \$1.62 1/2 minimum and \$2.02 1/2 maximum, basis No. 1 Manitoba Northern wheat in bulk in store Fort William Port Arthur. New Agreement will become effective July 16, 1962, with respect to administrative provisions, and on August 1, 1962 operationally, if accepted by Governments which participated in negotiations.

PROSPECTIVE PLANTINGS FOR 1962.... total 306 million acres, or 1.4 percent less than in 1961. If farmers' plans indicated to the Crop Reporting Board on March 1 materialize, 1962 planted acreage will be the smallest of record. However, farmers' intentions to plant may be altered by their decisions relative to participating in the 1962 Wheat and Feed Grain Programs. Planting intentions for 1962 in million acres, with planted acreage for 1961 in parentheses, are: Corn 69.3 (67.0), spring wheat 10.5 (12.2), oats 30.5 (32.5), barley 15.1 (15.8), flaxseed 3.1 (2.9), grain sorghums 14.6 (14.4), and soybeans 28.8 (28.1).

CANADIAN GRAIN ACREAGES FOR 1962 ... according to March 1 intentions reported to the Dominion Bureau of Statistics in million acres, with 1961 acreages in parentheses, are: Wheat 24.6 (23.8), oats 12.2 (11.6), barley 6.1 (6.1), rye 0.6 (0.5), flaxseed 1.9 (2.4), corn for grain 0.5 (0.5), and soybeans 0.3 (0.3).

Cash grain closing prices compared with support price at principal terminals <sup>1/</sup>

All prices rounded to nearest cent per bushel except grain sorghums per cwt.

<sup>1/</sup> Cash grain closing prices are on-track cash prices established at the close of the market. The terminal rate is used in determining the effective support price for grain in terminal storage or in transit to terminal and for calculating most county support rates. Effective support price is the established terminal support rate for grain received by rail minus the deduction for storage as of the date shown. Terminal price support rates are not established for corn, oats or soybeans at any market, nor for wheat and grain sorghums at Ft. Worth.

<sup>2/</sup> Galveston effective and terminal support price. A terminal support price is not established for Ft. Worth, but the cash price usually is backed by paid-in freight which will carry it to Galveston. Therefore, cash prices at Ft. Worth usually may be compared with effective support price at Galveston.

<sup>3/</sup> Applies only to the varieties Baar <sup>Burt</sup> and Bluestem of the sub-class Hard White.

<sup>4/</sup> The monthly average price is the simple average of the daily closing prices.

## GRAIN MARKETS MOSTLY UNCHANGED

Cash grain prices generally showed little change in rather quiet trading during the week ended March 29.

Wheat fluctuated within a narrow range and finished about unchanged from the previous week's close. Marketings of hard wheat increased in the Southwest as many owners were reported clearing stocks in anticipation of the coming harvest. Demand slacked off as some mills were confronted with a lack of storage space and export interest subsided a little. Soft wheat generally followed the action in the hard wheat market. Spring and durum wheat held steady at Minneapolis as there was nothing different in the news to affect prices one way or the other. White wheat remained unchanged at Portland where farmers showed a firm holding tendency and moderate marketings were absorbed by export interests. Rye declined 3¢ per bushel at Minneapolis, reflecting lower futures prices.

Corn prices edged up 1-4¢ per bushel over the course of the week at principal markets. Demand, although not urgent, was good, and supplies were generally ample for trade requirements. Some of the strength was attributed to trade opinion that acreage for this year's production will be down. Oats held firm behind good demand for rather limited offerings. Growing concern over planting delays also gave support to the market. Barley held firm, too, but malting type dropped 4-6¢ at Minneapolis where export demand dropped off. Some malting barley sold near the top of the feed range. Grain sorghum prices firmed up even though limited offerings found very little demand.

Soybean prices finished on a weak note, reflecting softer oil and meal markets and lower soybean futures prices. Flaxseed was unchanged at Minneapolis.

---

QUALITY OF CORN ... inspected at nine selected markets (see table below) during December 1961-February 1962 was much better than the same three months a year earlier. Carlot receipts at these markets increased sharply. They totaled 156.8 million bushels compared with 82.7 million the same period last year. Much of this increase was due to the heavy marketings that came from Commodity Credit Corporation-owned stocks. Quality of the corn formerly owned by CCC was much better. This is reflected by the fact that 48 percent of total carlot inspected receipts at these markets graded No. 2 or better this year. Only 16 percent of the total graded No. 2 or better corn last year. The percentage of receipts grading No. 3 and 4 was 35 percent this year compared with 59 percent last year. However, this year's bushel volume of these two grades was only slightly larger than last year's. Quantity of corn grading No. 5 was 10 percent this year compared with 19 percent last year. Sample Grade corn comprised 7 percent of this year's inspected receipts, or only 1 percentage point more than last year. This data is not indicative of the quality of 1961-crop corn, however, since receipts during the 3-month period represented a large quantity of old corn from CCC stocks.

<sup>1/</sup> Cash grain closing prices are on-track cash prices established at the close of the market. The terminal rate is used in determining the effective support price for grain in terminal storage or in transit to terminal and for calculating most county support rates. Effective support price is the established terminal support rate for grain received by rail minus the deduction for storage as of the date shown. Terminal price support rates are not established for corn, oats or soybeans at any market, nor for wheat and grain sorghums at Ft. Worth.

<sup>2/</sup> Galveston effective and terminal support price. A terminal support price is not established for Ft. Worth, but the cash price usually is backed by paid-in freight which will carry it to Galveston. Therefore, cash prices at Ft. Worth usually may be compared with effective support price at Galveston.

<sup>3/</sup> Applies only to the varieties Baart <sup>Burt</sup> and Bluestem of the sub-class Hard White.

<sup>4/</sup> The monthly average price is the simple average of the daily closing prices.

## GRAIN MARKETS ACTIVE AND STRONGER

Cash grain markets were active and prices turned upward during the week ended April 5. Export demand and light offerings were major factors.

Wheat prices went up 2-3¢ per bushel on all classes except durum. Hard wheat prices reached new crop-year highs in the Southwest. Strength stemmed mostly from good export demand, but prospective acreage cut backs under the stabilization program and higher support prices for 1962-crop wheat also were supporting factors. Inflow of grain from the country was moderate. Domestic demand was on the sluggish side, with many buyers waiting to see if current prices would attract more wheat into commercial channels. Spring wheat found good demand at Minneapolis, but buyers showed an indifferent attitude toward durum and prices dropped 10-15¢ per bushel. Durum receipts were light, but demand was limited by the slow sales of semolina. Macaroni and noodle manufacturers were booked well ahead; some through the balance of the crop year. White wheat trading in Portland was stimulated by active export demand for slim offerings. Rye prices also went up 3¢ per bushel at Minneapolis where receipts were down sharply and buying was much more active.

Corn finished in a firm position. Demand continued to absorb offerings. country buying increased, but the trade kept a close watch on weather and crop news.. Oats were 2¢ higher for the most part, reflecting good demand, light receipts, and trade anticipation of a smaller crop this year. Barley markets were firm, supported by light offerings and improved export interest. Grain sorghums advanced 3¢ per cwt. at Ft. Worth and 5¢ at Kansas City. Demand remained on the poor side in Texas but was spurred by small offerings and a favorable relationship to corn prices at Kansas City.

Oilseeds moved up 3¢ per bushel. Soybeans drew support from good demand, light selling in the country, strength in meal prices, and potential export loadings out of Chicago when the lakes open for navigation. Flaxseed was helped by continued strength at Winnipeg and some interest for "to arrive" flax at Minneapolis.

Average farm prices, parity and support rates.....	2
Feed grains - payment-in-kind export bids.....	7
Feed grains - CCC sales against Certificate Pool.....	7
Grains - CCC dispositions.....	8

SIGNUP FOR 1962 FEED GRAIN AND WHEAT STABILIZATION PROGRAMS ... has been extended through April 14 in 24 states where extreme weather conditions delayed the signup or recently passed legislation affected "summerfallow" farms. States where the extension applies are: Arkansas, Colorado, Idaho, Illinois, Indiana, Iowa, Kansas, Kentucky, Michigan, Minnesota, Missouri, Montana, Nebraska, New Mexico, North Dakota, Ohio, Oklahoma, South Dakota, Tennessee, Texas, Utah, Washington, Wisconsin, and Wyoming. Growers in these states now have until April 14 in which to get in a position to qualify for diversion payments and for price support on the 1962 crops. Only those growers who file program applications and who participate in the applicable program will be eligible for price support on crops for which a diversion program is available.

COUNTY AND TERMINAL PRICE-SUPPORT RATES FOR 1962-CROP FLAXSEED ... were announced recently. County and eight terminal loan rates are based on the 1962-crop national average support price of \$2.90 per bushel. This national rate is 10¢ per bushel higher than the \$2.80 per bushel national rate for 1961. County and terminal rates, which vary chiefly because of location, are further adjusted by premiums and discounts for grade and quality factors to determine support prices for individual producers. As in the past, county rates for major producing areas generally reflect terminal rates less handling and freight charges needed to get the flaxseed to terminals. Price support will be carried out, as in previous years, through farm- and warehouse-stored loans and purchase agreements. In designated Texas counties, where flaxseed is storable for a relatively short period, direct purchases will be the support method.

REVISED STANDARDS FOR GRAIN SORGHUMS ... will become effective August 1. The revision of the U. S. Standards for Grain Sorghum increases the minimum test weight per bushel for Grade No. 1 from 55 to 57 pounds, for Grade No. 2 from 53 to 55 pounds, Grade No. 3 from 51 to 53 pounds, and Grade No. 4 from 49 to 51 pounds. Maximum moisture limits have been reduced for Grade No. 1 from 14 to 13 percent, for Grade No. 2 from 15 to 14 percent, and for Grade No. 3 from 16 to 15 percent. No change was made for Grade No. 4. Revision also eliminates all the subclasses, and eliminates nongrain sorghum as a specific grade determining factor. Special grades "Bright Grain Sorghums" and "Discolored Grain Sorghums" also have been eliminated.

Average prices received by farmers, effective parity, and support rates  
(Dollars per bushel except grain sorghums per cwt.)

<sup>1/</sup> Cash grain closing prices are on-track cash prices established at the close of the market. The terminal rate is used in determining the effective support price for grain in terminal storage or in transit to terminal and for calculating most county support rates. Effective support price is the established terminal support rate for grain received by rail minus the deduction for storage as of the date shown. Terminal price support rates are not established for corn, oats or soybeans at any market, nor for wheat and grain sorghums at Ft. Worth.

<sup>2/</sup> Galveston effective and terminal support price. A terminal support price is not established for Ft. Worth, but the cash price usually is backed by paid-in freight which will carry it to Galveston. Therefore, cash prices at Ft. Worth usually may be compared with effective support price at Galveston.

<sup>3/</sup> Applies only to the varieties Baart and <sup>Burt</sup>Bluestem of the sub-class Hard White.

<sup>4/</sup> The monthly average price is the simple average of the daily closing prices.

## GRAIN MARKETS GENERALLY WEAKEN

Cash grain markets were mixed but mostly a little softer for the week ended April 12. Soft red wheat, durum wheat, some barley, and soybeans firmed up. Other cash grain prices were unchanged or lower, with corn, oats, and flaxseed down sharply.

Hard winter wheat closed on a weak note despite continued light selling by farmers and good demand, particularly from exporters. Soft red wheat, on the other hand, ruled firm, influenced mainly by the report of smaller farm stocks and the expected cut in harvested acreage because of the 1962 wheat stabilization program. Spring wheat declined 2¢ per bushel on a general lack of buying interest at Minneapolis, but renewed export buying pushed durum prices 15¢ higher. White wheat held steady at Portland. Export interest slackened, but the lack of market offerings was an important supporting factor. Rye met light trading and finished unchanged at Minneapolis.

Corn lost 1-5¢ per bushel as the cash market followed the futures down. Demand remained fairly good, but offerings were substantially larger. Record corn stocks on farms April 1 also were a depressing factor as many traders felt they would lead to heavy marketings later. Oats finished unchanged to 4¢ lower largely in sympathy with corn. Barley prices were generally unchanged but demand for top qualities boosted prices 2-3¢ per bushel on the high side of the range at Minneapolis. Grain sorghums held steady in light trading.

Soybean prices firmed up a little on light selling by farmers. Trading interest was tempered, however, by record high farm stocks and the anticipation of a substantial carryover at year's end. Report of heavy movement out of Chicago when navigation opens was a supporting factor. Flaxseed dropped 5¢ per bushel at Minneapolis, following the sharp loss at Winnipeg.

Grain stocks on farms, April 1.....	12

ACREAGE DIVERSION REPORTS ... show that through March 29 farmers have signed to divert 14.3 million acres of wheat, 2.7 million acres of barley, 20.1 million acres of corn, and 5.8 million acres of grain sorghum land from production to conserving uses under the 1962 wheat and feed grain programs. The 14.3 million acres of wheat signed for diversion are slightly more than 25.6 percent of 1961 wheat plantings of 55.6 million acres and almost 33 percent of the 43.3 million program acres on signed farms. Barley sign-up represents nearly 39 percent of the base acres on signed farms; corn, 45 percent; and grain sorghum, almost 43 percent.

WINTER WHEAT PRODUCTION ... for 1962 was estimated by the Crop Reporting Board as of April 1 at 921 million bushels. This is 14 percent less than the large 1961 crop of almost 1.1 billion bushels but is 5 percent above the 10-year (1951-60) average of 876.2 million bushels. Indicated yield per seeded acre is 23.6 bushels -- fourth highest of record but well below the record 26.9 bushel yield of 1958. Condition of rye as of April 1 was reported at 87 percent of normal, or 2 points below a year earlier but 3 points above the April 1 average.

GRAIN STOCKS ON FARMS ... April 1 were at record highs for corn and soybeans and at a record low for flaxseed. Farm stocks of other grains were down sharply. Corn stocks on farms were estimated at 2.1 billion bushels -- 3 percent above the previous record a year earlier and 40 percent above average for the date. More than a third of the farm stocks of corn were under CCC loan and purchase agreements. The 168 million bushels of soybeans stored on farms were more than double the April 1 stocks last year, reflecting record 1961 production and the slow rate of disappearance from farms during the first quarter of 1962. Wheat stocks on farms were estimated at 211 million bushels, 18 percent less than a year ago and 6 percent below average. Stocks of 432 million bushels of oats and 98 million bushels of barley were 11 and 24 percent, respectively, lower than on April 1, 1961. Rye stocks, at 4 million bushels, were 43 percent below a year earlier and the smallest since 1953. Although grain sorghum stocks of 85 million bushels were 22 percent below last year, they were 3 percent above average. Flaxseed stocks on farms, at 4 million bushels, were not only at a record low, but also were 19 percent below a year ago and 58 percent below average.

FOOD FOR PEACE DOLLAR CREDIT AGREEMENT WITH LIBERIA ... announced this week will finance the sale of \$8.6 million worth of U. S. agricultural commodities. Agreement was negotiated under Title IV of Public Law 480, which authorizes long-term supply and dollar credit sales. Commodities are to be delivered over a 3-year period, with payment to be made in annual installments over a more extended period. About 1,000 metric tons of wheat flour or bulgar wheat are among the quantities to be financed under the agreement in the first supply period -- calendar year 1962.

A NEW MILLFEED FUTURES MARKET ... will be inaugurated by the St. Louis Merchants Exchange about May 1. Trading will be conducted only in wheat middlings or wheat gray shorts. The new millfeed futures market provides a bulk delivery contract and multiple delivery points. This is contrary to past millfeed futures markets with contracts based principally on delivery in bags within the basing market. Further information can be obtained from: Secretary, Merchants Exchange, 5100 Oakland Avenue, St. Louis 10, Missouri.

<sup>1/</sup> Cash grain closing prices are on-track cash prices established at the close of the market. The terminal rate is used in determining the effective support price for grain in terminal storage or in transit to terminal and for calculating most county support rates. Effective support price is the established terminal support rate for grain received by rail minus the deduction for storage as of the date shown. Terminal price support rates are not established for corn, oats or soybeans at any market, nor for wheat and grain sorghums at Ft. Worth.

<sup>2/</sup> Galveston effective and terminal support price. A terminal support price is not established for Ft. Worth, but the cash price usually is backed by paid-in freight which will carry it to Galveston. Therefore, cash prices at Ft. Worth usually may be compared with effective support price at Galveston.

Burt

<sup>3/</sup> Applies only to the varieties Baart and Bluestem of the sub-class Hard White.

<sup>4/</sup> The monthly average price is the simple average of the daily closing prices.

Volume 10 No. 16

Washington 25, D. C.

April 20, 1962

## GRAIN MARKETS GENERALLY UNCHANGED

Most cash grain prices showed only minor fluctuations during the week ended April 19. Bread grains, corn, oats, and soybeans finished about unchanged. Grain sorghum prices were mixed, but barley and flaxseed markets weakened.

Prices held steady on most classes of wheat. Selling by southwestern farmers was practically at a standstill. Export buying slacked off a little, but domestic mills, merchandisers and blenders readily absorbed relatively light spot offerings. Slight weakness in spring wheat at Minneapolis reflected to some extent the temporary delay in shipping via the St. Lawrence Seaway and to quietness in flour trade. Durum wheat, however, broke 30¢ per bushel when exporters stepped out of the market. White wheat, supported by light country selling and scattered export interest in nearby positions, edged up 3¢ per bushel at Portland. Rye held firm at Minneapolis.

Corn also held firm as a late recovery wiped out earlier declines. Heavy receipts and a break in one of the locks on the St. Lawrence Seaway depressed the market early. It was promised that early repairs would be made of the broken lock. Oats were firm, with good demand for light receipts, late seeding, and possible acreage cuts. Barley was unchanged at most markets but lost up to 6¢ per bushel in Minneapolis where both maltsters and exporters were slow buyers. Grain sorghums lost 1-4¢ per cwt. at Kansas City when demand caught up to current requirements but held firm in limited trading at Ft. Worth.

Soybeans closed about unchanged. Country selling continued light but unsatisfactory crushing margins and a quiet soybean oil market had a depressing effect on the cash soybean market. Flaxseed lost 5¢ at Minneapolis.

## Special Features

	<u>Page</u>
Feed grains - payment-in-kind export bids.....	7
Feed grains - CCC sales against Certificate Pool.....	7
Wheat, rye, corn, oats, barley, grain sorghums, soybeans and flaxseed - amount put under price support.....	8-15
Grains - amount under price support.....	16

QUANTITY OF 1961-CROP CORN PUT UNDER PRICE SUPPORT ... loans and purchase agreements through March 31 totaled 498.5 million bushels. This compares with 516.4 million bushels put under support through the same date a year earlier. Farmers had repaid loans on a little over 2 million bushels of 1961-crop corn. Loans were outstanding on 50.2 million bushels stored in warehouses and 429.6 million bushels in farm storage. Another 15.9 million bushels were outstanding under purchase agreements. Farmers also had repaid loans on 113.2 million bushels of wheat, 24.8 million bushels of barley, and 11.7 million bushels of soybeans through March 31. Of the 120.6 million bushels of 1961-crop soybeans outstanding under support, 54.8 million were warehouse-stored, 48.1 million farm-stored, and 17.7 million were under purchase agreements. (Details of repayments, deliveries, and loans and purchase agreements outstanding for all grains are shown on pages 8-16.)

WHEAT AND FLOUR EXPORTS ... during February totaled 59.2 million bushels -- 46.5 million wheat and 12.7 million flour in bushel equivalent. February flour figure was reported originally by the Bureau of the Census at 17.9 million bushel equivalent but was revised later to 12.7 million. This revision was in the amount of flour exported to Egypt. It was reported originally at 10.7 million bushel equivalent but was revised later to 5.5 million. Total wheat and flour exports from July 1, 1961-February 28, 1962 now total 471.8 million bushels -- 403.1 million wheat and 68.7 million flour in bushel equivalent. Exports during the same 8-month period of the previous season totaled 416.8 million bushels -- 351.8 million wheat and 65 million flour in bushel equivalent. (These revisions are shown in the "Export" portion of the middle table on page 5.)

ACREAGE DIVERSION REPORTS ... show that through April 5 farmers have signed up to divert 14.7 million acres of wheat under the 1962 stabilization program. They also have signed to divert 2.9 million acres of barley, 21.8 million acres of corn, and 6.4 million acres of grain sorghum land from production to conserving uses under the 1962 feed grain program. The 14.7 million acres of wheat now signed for diversion are almost a third of the 44.6 million program acres on signed farms. They also represent slightly more than 26 percent of 1961 wheat plantings of 55.6 million acres. Barley sign-up represents nearly 39 percent of the base acres on signed farms; corn, almost 45 percent of the base acres; and grain sorghum, about 43 percent of the base acres.

PURCHASE OF ROLLED WHEAT FOR DOMESTIC DONATION ... to needy families, school lunch programs and institutions was announced by USDA this week. The purchase of 6,163,200 pounds of rolled wheat brings the total since the beginning of the program to 51,094,460 pounds. This wheat is being purchased by the Commodity Credit Corporation with wheat payment-in-kind export certificates. Use of export certificates will encourage movement out of CCC inventory since wheat obtained from redemption of payment-in-kind certificates must be exported. The purchase program for rolled wheat was initiated to take the place of the program for processing of government-owned oats, which was terminated because quantities of oats owned by CCC were no longer in oversupply.

Cash grain closing prices compared with support price at principal terminals <sup>1/</sup>  
All prices rounded to nearest cent per bushel except grain sorghums per cwt.

<sup>1/</sup> Cash grain closing prices are on-track cash prices established at the close of the market. The terminal rate is used in determining the effective support price for grain in terminal storage or in transit to terminal and for calculating most county support rates. Effective support price is the established terminal support rate for grain received by rail minus the deduction for storage as of the date shown. Terminal price support rates are not established for corn, oats or soybeans at any market, nor for wheat and grain sorghums at Ft. Worth.

<sup>2/</sup> Galveston effective and terminal support price. A terminal support price is not established for Ft. Worth, but the cash price usually is backed by paid-in freight which will carry it to Galveston. Therefore, cash prices at Ft. Worth usually may be compared with effective support price at Galveston.

<sup>3/</sup> Applies only to the varieties Baart <sup>Burt</sup> and Bluestem of the sub-class Hard White.

<sup>4/</sup> The monthly average price is the simple average of the daily closing prices.

QUARTERLY  
SUMMARY  
AND  
STATISTICS

GRAIN DIVISION

AGRICULTURAL MARKETING SERVICE

UNITED STATES DEPARTMENT OF AGRICULTURE

Volume 5 No. 2

Washington 25, D. C.

April 26, 1962

Grain prices, except Durum wheat, malting barley and rye, generally strengthened during the January-April period with most prices averaging above a year earlier. Strength stemmed in part from good export demand, somewhat smaller supplies and the higher price support rates. Durum wheat, malting barley and rye declined slightly during the first four months of the year. Grain prices during the first three weeks of April were above last year with the exception of soybeans which were about 65-67¢ per bushel below a year ago.

WHEAT ... prices generally advanced during April reflecting record export demand, smaller supplies and the higher support rate for the new 1962 crop. With an announced average support rate of \$2.00 per bushel for the 1962 crop -- 21¢ above the 1961 rate -- prices have not shown the usual early season weakness. Winter wheat prices at the middle of April were 4-6¢ above the 1961 effective support rate and 6-7¢ above the January average. Hard spring wheat prices, which were 17¢ above support at the middle of April, were about unchanged from the January average. Durum wheat prices declined sharply but the April average was well above a year ago. White wheat in the Pacific Northwest advanced 6¢ in the first four months of this year. Stocks of wheat in all positions on April 1 totaled 1.6 billion bushels -- 4 percent below a year ago. Of the total stocks, the Commodity Credit Corporation owned 1,046 million bushels. An additional 228 million were outstanding under support or resale, leaving around 368 million bushels of "free" wheat -- an increase of around 60 million compared with a year ago. Exports of wheat and flour totaled 530 million bushels July through March, 40 million more than the same months last season. Flour millings the first nine months totaled 469 million -- the largest since 1948-49. Canadian stocks of wheat on March 31 totaled 482 million bushels compared with 750 million a year earlier and 904 million the record in 1957.

RYE ... prices declined around 6¢ per bushel the first four months of this year but the average for the first three weeks of April was 17¢ above a year ago. Stocks of 14.6 million bushels in all positions April 1 were nearly 6 million below last year but slightly larger than two years ago. Disappearance of rye during July-March totaled 27.6 million, about 2 million above the same period last season. Most of the increase is in farm usage, feed and seed, since commercial disappearance was at about last year's rate. Canadian stocks of rye March 31, totaled 6.2 million bushels -- a little less than half those a year ago.

CORN ... prices have been relatively stable since the first of the year with some advance reported at the principal markets during April. The average for the first three weeks of April ranged 3-10¢ above a year ago reflecting in part smaller stocks and record exports. Corn stocks of 3,386 million on April 1 were 8 percent below last year. CCC owned 997 million bushels on April 1 this year, as against 1,406 million a year earlier. An additional 867 million were under loan or resale this year as against 729 million last year. CCC sales of corn October

through March totaled 673 million bushels as against 119 million the same period last season. Disappearance of corn the first half of the season was a record 2,248 million reflecting heavy exports and feeding. Exports totaled 207 million the first six months -- 66 million above the previous record. Other commercial disappearance including alcohol and wet milling were both above recent years. Corn feeding of over 1.9 billion bushels was nearly 8 percent above last season. Feeding of corn per animal unit totaled 11.3 bushels the first half of the season as against 10.7 last year and 10.9 two years ago.

OATS ... prices advanced during April and for the first three months of this year farm prices averaged 5¢ per bushel above last year. April 1 oats stocks totaled 494 million bushels -- 11 percent less than last April and the 10-year average. Oats disappearance, July-March, totaled 844 million bushels, the smallest in over 20 years. This compares with 865 million last year and 936 million the same months of 1959-60. Exports of less than 8 million the first 9 months were about a third those of last year and the smallest since 1954-55. Around 782 million bushels were fed or a little under 4.6 bushels per animal unit. Last year 4.7 bushels were fed per animal unit; two years ago 5.1 bushels. Canadian stocks of oats, March 31, totaled 177 million this year as against 242 million last year.

BARLEY ... prices were steady to strong on the West Coast and at Kansas City but prices at Minneapolis, particularly malting types, weakened in the January-April period. Prices at Portland advanced 2¢ during this period while No. 2 Malting declined around 10¢ at Minneapolis. Stocks in all positions April 1, at 215 million were 13 percent less than a year earlier but 11 percent above average. Barley disappearance during July-March at 344 million was down from the three previous seasons due mainly to reduced exports. Exports during the first 9 months totaled about 47 million bushels, 15 million below last year and about half the two previous seasons. Industrial usage continued about unchanged. Feeding of 221 million, only slightly below last year, was the second largest for the 9-month period since 1943-44. Canadian barley stocks totaled 111 million on March 31 compared with 193 million a year earlier.

GRAIN SORGHUMS ... prices advanced gradually during this season with farm prices averaging around 20¢ per cwt. above last season. April 1 stocks totaled 853 million bushels or 477 million cwt. This was only slightly less than the record of a year ago. Of the total stocks, CCC owned 299 million cwt. and farmers had 120 million under loan or resale. Disappearance of 186 million cwt. the first half of the season ran 5 million below the same period last year. Exports of 25 million cwt. were nearly 5 million above last year while feeding was down slightly.

SOYBEAN ... prices advanced gradually during the season but for the first three weeks of April were 66¢ per bushel below a year ago at Illinois points. However, prices the first three months, October-December, averaged 29¢ above a year earlier while in the four months January-April, prices averaged 33¢ below a year ago. Stocks of 359 million in all positions, April 1, were the largest of record -- nearly 100 million more than a year ago. Exports of 93 million the first six months were 8 million more than last year. Crushings of 230 million compare with 218 million in the comparable six-month period last year.

FLAXSEED ... prices continued to advance the first four months of this year reflecting short supplies in this country and Canada. The average for the first three weeks of April at Minneapolis was 50¢ per bushel above a year earlier. Stocks of flaxseed at the first of April totaled 9.1 million bushels, the smallest since 1947 and 6.2 million below a year ago. Flaxseed crushings the first nine months this season totaled 15.3 million bushels, one million more than last season. Around one million bushels were exported, less than a third of last year.

NOTE: Data on stocks, production and seed usage from Crop Reporting Board; imports, exports and quantity of wheat, rye, soybeans, and flaxseed processed from Census Bureau; and alcohol usage from Internal Revenue Service. January-March 1962 data partly estimated.

## GRAINS: AVERAGE CASH PRICES FOR SPECIFIED MONTHS

(All prices in cents per bushel except grain sorghums in cents per cwt.)

## GRAIN MARKETS LITTLE CHANGED

Most cash grain prices showed little change during the week ended April 26. Spring wheat and oats firmed up slightly while soybeans weakened. Trading was seasonally quiet.

Winter wheat closed unchanged to 1¢ lower despite light offerings and a generally good export demand. Farm marketings continued small but the latest report on stocks in all positions indicate large supplies of "free" wheat. Spring wheat advanced 2-3¢ due mainly to light receipts rather than increased flour interest. Durum wheat dropped 5-10¢ with limited demand. White wheat held firm at Portland reflecting improvement in mill buying and continued export demand. Rye dropped 2-3¢ at Minneapolis due to limited export interest.

Corn prices were unchanged to 2¢ higher with a good demand for light country offerings. Oats showed a mixed trend with slight weakness reported at Minneapolis but gains of 2¢ reported at Chicago. Seeding of oats pushed rapidly into the northern sections of the country but progress was behind normal in the heavy-producing Corn Belt. Barley was unchanged at most markets but lost up to 6¢ per bushel in Minneapolis where both malsters and exporters were slow buyers. Grain sorghums finished unchanged with a fair demand for light offerings.

Soybeans dropped 2-3¢ reflecting the record stocks and weakness in the oil market. April 1 stocks totaled a record 359 million -- nearly 100 million more than a year ago. Flaxseed continued unchanged at Minneapolis.

---

Wheat - CCC-owned stocks by classes, March 31.....	10
Feed grains - CCC sales against Certificate Pool.....	10
Wheat - supply and distribution in four exporting countries.....	11
Feed grains - payment-in-kind export bids.....	12

WHEAT SUPPLIES ... for export or carryover in the four principal exporting countries (United States, Canada, Argentina and Australia) amounted to 2,070 million bushels on April 1. This is 420 million below the record supplies of a year earlier and about 300 million below two years ago. Supplies were smaller in each of the countries with the biggest reduction in Canada where April 1 supplies totaled 395 million this year as against 674 million last year. Supplies in Australia of 112 million were 84 million below last year. Exportable supplies in Argentina on April 1 totaled 36 million this year as against 46 million last year. Exports of wheat and flour, July through March in million bushels, (with comparable figures a year earlier in parentheses) follow: United States 530 (490); Canada 273 (223); Argentina 53 (64); Australia 180 (119); and total 1,036 (896).

ACREAGE DIVERSION REPORTS ... show that through April 12 farmers have signed up to divert 14.9 million acres of wheat under the 1962 stabilization program. They also have signed to divert 3.0 million acres of barley, 22.3 million acres of corn, and 6.6 million acres of grain sorghum land from production to conserving uses under the 1962 feed grain program. The 14.9 million acres of wheat now signed for diversion are almost a third of the 45.3 million program acres on signed farms. They also represent almost 27 percent of 1961 wheat plantings of 55.6 million acres. Barley sign-up represents slightly more than 39 percent of the base acres on signed farms; corn, slightly more than 45 percent of the base acres; and grain sorghum, more than 43 percent of the base acres.

<sup>1/</sup> Cash grain closing prices are on-track cash prices established at the close of the market. The terminal rate is used in determining the effective support price for grain in terminal storage or in transit to terminal and for calculating most county support rates. Effective support price is the established terminal support rate for grain received by rail minus the deduction for storage as of the date shown. Terminal price support rates are not established for corn, oats or soybeans at any market, nor for wheat and grain sorghums at Ft. Worth.

<sup>2/</sup> Galveston effective and terminal support price. A terminal support price is not established for Ft. Worth, but the cash price usually is backed by paid-in freight which will carry it to Galveston. Therefore, cash prices at Ft. Worth usually may be compared with effective support price at Galveston.

<sup>3/</sup> Applies only to the varieties Baart and Bluestem of the sub-class Hard White.

<sup>4/</sup> The monthly average price is the simple average of the daily closing prices.

## GRAIN MARKETS MIXED

Wheat, corn and oats prices generally advanced but other cash grains showed little or no change during the week ended May 3.

Winter wheat finished 2-5¢ per bushel higher. Hard wheat prices were at new crop-year highs, while both hard and soft wheat stood well above the effective support rate and around 20-30¢ per bushel above a year ago. Strength was attributed mainly to good export demand and tight offerings. Selling by farmers was practically at a standstill, and supplies from interior markets were on the scant side. Domestic mills showed a little more interest this week, but buying was held to immediate needs pending new-crop arrivals. Futures prices were supported by unfavorable weather and crop reports, expectations of heavy export business, and talk about shipments to Red China. Spring wheat went up 2-4¢ and durum was nominally 15¢ higher at Minneapolis. Spring wheat drew support from the tight selling policy, higher futures prices, and to fairly good demand for diversion point wheat. Soft white wheat weakened under pressure from slow export and domestic demand at Portland. Rye held steady at Minneapolis, reflecting light flour sales and lack of export interest.

Cash corn prices moved up 1-3¢ per bushel with good demand rapidly absorbing available offerings. The slowdown in CCC selling helped build up demand for cash corn. Oats were firmer on light offerings, but borrowed some strength from corn, the possibility of a late harvest due to late plantings, and reports of dry conditions in Western Canada. Barley was generally unchanged except that malting type lost 2-4¢ in Minneapolis where buyers showed little interest in light offerings. Grain sorghum prices were firm behind good demand.

Soybeans finished about unchanged. Country marketings continued light but shippers were dribbling enough beans into the market to meet immediate crushing needs. Flaxseed buyers lowered their bids and prices finished 3¢ per bushel lower at Minneapolis.

FINAL ACREAGE DIVERSION SIGN-UP REPORTS ... show that through April 16 farmers on 821,845 farms signed up to divert 15,065,300 acres from wheat production to conserving uses this year. This is 33 percent of the 45.6 million program acres on signed farms and almost 27 percent of the 55.6 million acres planted to wheat in 1961. Farmers also signed up to divert 22,881,500 acres of corn under the 1962 feed grain program. This is slightly more than 45 percent of the 50.5 million base acres on signed farms. Diversion of 6,709,400 acres of grain sorghum land represented more than 43 percent of the 15.5 million base acres on signed farms. Barley diversions of 3,093,600 acres were slightly more than 39 percent of the 7.9 million base acres on signed farms.

<sup>1/</sup> Cash grain closing prices are on-track cash prices established at the close of the market. The terminal rate is used in determining the effective support price for grain in terminal storage or in transit to terminal and for calculating most county support rates. Effective support price is the established terminal support rate for grain received by rail minus the deduction for storage as of the date shown. Terminal price support rates are not established for corn, oats or soybeans at any market, nor for wheat and grain sorghums at Ft. Worth.

<sup>2/</sup> Galveston effective and terminal support price. A terminal support price is not established for Ft. Worth, but the cash price usually is backed by paid-in freight which will carry it to Galveston. Therefore, cash prices at Ft. Worth usually may be compared with effective support price at Galveston.

<sup>3/</sup> Applies only to the varieties Burt and Bluestem of the sub-class Hard White.

<sup>4/</sup> The monthly average price is the simple average of the daily closing prices.

May 11, 1962

## GRAIN MARKETS LITTLE CHANGED

Cash grain prices followed a slightly irregular course but closed about unchanged for the week ended May 10.

Winter wheat finished on a firm note. Farmers and other country holders continued to delay sales. This along with strong export demand from the Gulf helped widen the gap between trade requirements and available supplies of "free" wheat. Forecast of a 17 percent smaller winter wheat crop of 891 million bushels also had a strengthening influence. Spring wheat, on the other hand, declined 3¢ per bushel on a late fall off in demand at Minneapolis but durum held steady in quiet trading. Soft white wheat edged up 1-2¢ at Portland. A somewhat better buying interest met a continued firm holding tendency on the part of producers. Rye held steady in narrow trading at Minneapolis.

Cash corn prices were about unchanged at the close. Offerings were a little tight in some areas but were generally about in line with trade needs. Good export bookings at Chicago helped support the market. Oats held firm, supported by limited offerings, late plantings in this country, and dry conditions in Canada. Barley prices were mostly unchanged with buyers showing an indifferent attitude in accumulating supplies until more is known about acreage and crop conditions. Grain sorghum prices weakened and demand improved on the decline.

Soybean markets were inactive throughout the period and prices closed unchanged from a week ago. Country marketings remained light but processors were not anxious to buy in view of the poor market for soybean oil. However, the market drew some support from heavier inspections for export. Flaxseed was unchanged in quiet trading at Minneapolis.

Wheat and flour - export program rates.....	12

WINTER WHEAT PRODUCTION ... was estimated by the Crop Reporting Board on May 1 at 891 million bushels -- 3 percent under the April 1 forecast, 17 percent below last year, but 2 percent above the 10-year (1951-60) average. Condition of rye on May 1 was 88 percent of normal -- the same as a year ago and 2 points above average.

COUNTY PRICE SUPPORT RATE FOR 1962-CROP OATS ... were announced this week. Rates are based on the 1962 national average support price of 62¢ per bushel for Grade No. 1 oats. County rates for 1962 will be unchanged from 1961 rates, except for an increase in the rate for Alaska. Terminal rates are not established for oats. Participation in the 1962 feed grain program for corn, grain sorghum, or barley will not be a condition of eligibility for price support on oats. Price support will be carried out, as in previous years, through farm- and warehouse-stored loans and purchase agreement. Support will be available from harvest time through January 31, 1963. Loans will mature on February 28, 1963 in 16 eastern and southern states and on April 30, 1963 in all other states.

MARKETING QUOTA PENALTY RATE FOR 1962 "EXCESS" WHEAT ... was announced this week at \$1.59 per bushel. This compares with a 1961-crop penalty rate of \$1.08 per bushel. When wheat marketing quotas are in effect as they are for 1962-crop wheat, the law requires penalties on excess wheat production at the rate of 65 percent of parity as of May 1 of the crop year. The \$1.59 penalty rate announced this week reflects 65 percent of the May wheat parity price of \$2.44 per bushel. This rate times a farm's wheat excess, expressed in bushels, determines the actual amount of penalty.

FOOD FOR PEACE AUTHORIZATION ISSUED TO ISRAEL ... recently provides for the purchase of about 22,000 metric tons of grain sorghums, in bulk, Grade U. S. No. 2 or better, from U. S. suppliers. Sales contracts made between May 4 and May 31 will be eligible for financing. Delivery will be to importer f.o.b. vessel, port of exportation, and shipments may be made between May 4 and June 30. The usual 7-day waiting period before contracting and delivery was waived because of the urgent need for grain sorghums in Israel. Authorization was issued under Title I, Public Law 480.

<sup>1/</sup> Cash grain closing prices are on-track cash prices established at the close of the market. The terminal rate is used in determining the effective support price for grain in terminal storage or in transit to terminal and for calculating most county support rates. Effective support price is the established terminal support rate for grain received by rail minus the deduction for storage as of the date shown. Terminal price support rates are not established for corn, oats or soybeans at any market, nor for wheat and grain sorghums at Ft. Worth.

<sup>2/</sup> Galveston effective and terminal support price. A terminal support price is not established for Ft. Worth, but the cash price usually is backed by paid-in freight which will carry it to Galveston. Therefore, cash prices at Ft. Worth usually may be compared with effective support price at Galveston.

<sup>3/</sup> Applies only to the varieties Burt and Bluestem of the sub-class Hard White.

<sup>4/</sup> The monthly average price is the simple average of the daily closing prices.

Washington 25, D. C.

May 18, 1962

## GRAIN MARKETS HOLD ABOUT STEADY

Cash grain prices drifted within a narrow range and closed generally unchanged for the week ended May 17. Durum wheat, however, dropped 15¢ per bushel.

Winter wheat finished about steady. Movement of "free" stocks from farms and other interior points continued light. Gulf export markets were strong. Domestic mill demand was good, but some buyers appeared to be awaiting new-crop movement which is expected to get under way within the next 10 days. Early strength attributed to growing concern over premature ripening caused by hot, dry weather was offset by late weakness due to reports of widespread showers in the Texas Panhandle, Western Oklahoma, Kansas, and Eastern Colorado. Spring wheat was about unchanged behind strong demand at Minneapolis, but durum prices fell 15¢. White wheat held firm at Portland. Export trade was light, but the firm holding tendency and relatively light offerings provided support for the cash market. Rye was unchanged at Minneapolis.

Corn prices edged up 1-2¢ per bushel at principal markets, reflecting good mill and export demand for light offerings. Oats held about steady with light offerings finding ready outlets. Barley prices were generally unchanged but a little firmness developed on improved export interest. Grain sorghum markets were mixed -- firm behind good demand at Kansas City but weak on larger offerings at Ft. Worth.

Soybean prices closed generally unchanged. Trading was quiet and closely followed action in meal and oil futures. Country marketings continued light, but processors were not under pressure for supplies. Flaxseed lost 4¢ in Minneapolis as larger receipts found less buying interest.

Feed grains - payment-in-kind export bids.....	7
Feed grains - CCC sales against Certificate Pool.....	7
Wheat - supply and distribution, monthly.....	8

TEMPORARY POSTPONEMENT OF 1963 WHEAT PROCLAMATIONS ... was announced this week. Legislation, approved by the President, permits the Secretary of Agriculture to defer until June 15, 1962 any proclamations relating to marketing quotas and acreage allotments for the 1963 wheat crop. Otherwise, any proclamation for the 1963 wheat crop would have been required to be made no later than May 15.

FOOD FOR PEACE WHEAT AUTHORIZATIONS ISSUED TO KOREA ... this week provide for the purchase of about 63,000 metric tons of wheat, Grade U. S. No. 2 or better, in bulk, from U. S. suppliers. Authorizations were issued under Title I, Public Law 480. Only the following wheat will be eligible for financing: (1) Hard red spring, northern spring and red spring; (2) hard red winter of the subclasses dark hard winter, hard winter and yellow hard winter; and (3) mixed wheat containing not more than 5 percent of the classes of wheat, excluding durum, other than the classes specified in (1) and (2). Sales contracts made between May 24 and August 31 will be eligible for financing. Delivery will be to importer, f.o.b. vessel, ports of exportation. Shipments may be made between May 24 and September 30.

"ANALYSIS OF GRAIN EXPORT PROGRAMS" REPORT ... of the Technical Committee on Grain Exports was released this week. Report examines four different types of grain export programs with respect to their effects on domestic production and consumption exports, farm prices and incomes, and Commodity Credit Corporation inventory management, investment, and costs. Programs analyzed are: (1) the present grain export program, under which payments-in-kind (PIK) are made for the difference between domestic and world market prices for all grains except those coming from CCC stocks for foreign emergency relief, barter sales, credit sales, and foreign donations through charitable agencies; (2) a modification of the present program under which cash subsidies would replace PIK; (3) a further modification under which cash subsidies would be made for dollar sales only; and (4) a program under which exports would be made only from CCC stocks except when domestic market prices were competitive with world prices. A free copy of "Analysis of Grain Export Programs." Miscellaneous Publication No. 905, may be obtained from the Office of Information, U. S. Department of Agriculture, Washington 25, D. C.

<sup>1/</sup> Cash grain closing prices are on-track cash prices established at the close of the market. The terminal rate is used in determining the effective support price for grain in terminal storage or in transit to terminal and for calculating most county support rates. Effective support price is the established terminal support rate for grain received by rail minus the deduction for storage as of the date shown. Terminal price support rates are not established for corn, oats or soybeans at any market, nor for wheat and grain sorghums at Ft. Worth.

<sup>2/</sup> Galveston effective and terminal support price. A terminal support price is not established for Ft. Worth, but the cash price usually is backed by paid-in freight which will carry it to Galveston. Therefore, cash prices at Ft. Worth usually may be compared with effective support price at Galveston.

<sup>3/</sup> Applies only to the varieties Baart and Bluestem of the sub-class Hard White.

<sup>4/</sup> The monthly average price is the simple average of the daily closing prices.

## GRAIN MARKETS GENERALLY WEAKEN

Cash grain markets generally drifted to lower levels during the week ended May 24. Corn and grain sorghum prices were little changed but other grains declined 1-5¢ per bushel.

Winter wheat declined 1-2¢ despite continued light selling by farmers and good demand. The first car of new crop wheat was received in Ft. Worth on May 22. Continued dry weather in the Texas area would bring peak harvest quickly. Spring wheat declined 3¢ reflecting generally improved crop prospects. Demand for both wheat and flour was very slow. Durum wheat was down 5¢ per bushel with timely rains improving prospects in North Dakota. White wheat was unchanged to 1¢ higher at Portland. Rye lost 5¢ due also to improved prospects for the 1962 crop.

Cash corn prices averaged about unchanged from a week ago. Offerings were light and these were quickly absorbed. Planting of the new crop made good progress with beneficial rains in most areas. Oats declined 2-5¢ with improved outlook for the new crop. Malting barley prices continued steady but feeding types declined 3-5¢ per bushel. Grain sorghums were steady with a fair demand for light offerings.

Soybeans declined 2¢ per bushel due in part to poor crushing margins. Oil prices continued to decline but meal was about steady. Soybean stocks at processing plants on April 30 were 25 million bushels under a year ago. Crop prospects continued good. Flaxseed dropped 6¢ reflecting the better crop condition.

Wheat, rye, corn, oats, barley, grain sorghums, soybeans and flaxseed - amount put under price support.....	8-15
Grains - amount under price support.....	16

PRICE SUPPORT ACTIVITIES ... showed that farmers had put 548.5 million bushels of 1961-crop corn under price support through April 30. This is slightly more than the 545 million put under from the 1960 crop at the same date a year earlier. Farmers had delivered about 108 million bushels of 1961-crop wheat at the end of April -- less than half the 221 million delivered a year earlier. Only 20.6 million bushels remained outstanding under support as against 56 million at the end of April 1961. Farmers delivered 101 million cwt. grain sorghums to CCC through April 30 -- slightly more than the 90 million delivered a year earlier. Of the 132.5 million bushels of soybeans put under support, 112 million remained outstanding at the end of April. A year earlier only 3.5 million were outstanding of the 25.6 million put under support. (Details by States, pages 8-15)

SOYBEANS CRUSHED ... for oil during April totaled 36.5 million bushels as against 38.8 million in March and 33.0 million in April 1961. Crushings, October through April, totaled 266 million -- 15 million more than during the same period last season. Exports for the same seven months totaled 104 million, an increase of 11 million over a year earlier. Supplies for processing, export or carryover totaled 290 million bushels this May 1 or nearly 100 million more than on May 1, 1961. These supplies are derived by subtracting exports and crushings for the seven months and farm use for the season from the total supply. The quantity of 1961-crop soybeans remaining under price support at the first of May totaled 112 million as against only 3.5 million a year earlier.

FOOD FOR PEACE AGREEMENT WITH VENEZUELA ... to finance the sale of \$8,940,000 worth of U. S. corn and cotton was announced May 18. The agreement was negotiated under Title IV of Public Law 480, which authorizes long-term supply and dollar credit sales to expand U. S. dollar markets abroad and economic development in other countries. The food for peace agreement with United Arab Republic was amended to provide for sale of an additional \$28.1 million worth (about 14.7 million bushels of U. S. wheat or wheat flour for Egyptian pounds.

<sup>1/</sup> Cash grain closing prices are on-track cash prices established at the close of the market. The terminal rate is used in determining the effective support price for grain in terminal storage or in transit to terminal and for calculating most county support rates. Effective support price is the established terminal support rate for grain received by rail minus the deduction for storage as of the date shown. Terminal price support rates are not established for corn, oats or soybeans at any market, nor for wheat and grain sorghums at Ft. Worth.

<sup>2/</sup> Galveston effective and terminal support price. A terminal support price is not established for Ft. Worth, but the cash price usually is backed by paid-in freight which will carry it to Galveston. Therefore, cash prices at Ft. Worth usually may be compared with effective support price at Galveston.

<sup>3/</sup> Applies only to the varieties Burt and Bluestem of the sub-class Hard White.

<sup>4/</sup> The monthly average price is the simple average of the daily closing prices.

## GRAIN MARKETS MIXED

Cash grain markets showed a mixed trend during the week ended May 31, but gains and losses generally held within narrow bounds.

Winter wheat closed unchanged to 2¢ per bushel higher, with most of the strength on ordinary or the lower proteins. New-crop harvesting continued to gain momentum in Texas, Oklahoma and southern Kansas. However, offerings by farmers and country shippers were limited. Domestic and export demand was fairly good, but many buyers appeared to be waiting for the influx of new-crop wheat before making purchases. Spring wheat prices, influenced mainly by widespread rains in major producing areas, weakened slightly at Minneapolis. Durum, on the other hand, lost 7-10¢ per bushel behind continued slow flour sales. White wheat held firm on improved export demand at Portland. Rye worked 5¢ higher at Minneapolis as buyers showed more interest and demand increased with West Germany buying large quantities. Interest in rye flour sales also picked up.

Corn prices remained generally unchanged with no new developments in the market. Receipts were light and found good demand. Oats went down 1-2¢ per bushel at major markets, reflecting to a large extent narrow demand and impending new-crop movement in early producing areas. Barley prices dropped 2-4¢ as a rule, with feed type off 10-14¢ in Minneapolis. Demand, particularly from exporters, slowed, but some of the weakness was due to new-crop movement in southern areas. Grain sorghums were offered more freely and prices weakened a little.

Soybeans closed on a firm note, bolstered by strength in the futures market for meal and increased talk of reduced crushing activity due to unsatisfactory conversion rates. Flaxseed lost 5¢ per bushel in Minneapolis. The loss reflected for the most part the drop in linseed oil prices.

TERMINAL AND COUNTY 1962-CROP WHEAT PRICE SUPPORT RATES ... were announced recently. Rates are based on the 1962 national average minimum support price of \$2.00 per bushel in the 39-State commercial wheat-producing area. Freight rate changes, production shifts from area to area, and increased durum wheat premiums, all of which are reflected in computations of county and terminal rates, result in a smaller increase (19¢ per bushel) for 1962 terminal rates over 1961 rates than the overall 1962 national support increase (21¢ per bushel) over the 1961 national average support price of \$1.79. No change has been made in the price relationships among terminals from those for last year's program. The list of premiums and discounts for different classes, grades and qualities of wheat also was announced. In a major change announced previously, wheat quality premiums paid to producers on hard red spring, hard red winter and hard white wheat will be based on the sedimentation test rather than on the protein test.

<sup>1/</sup> Cash grain closing prices are on-track cash prices established at the close of the market. The terminal rate is used in determining the effective support price for grain in terminal storage or in transit to terminal and for calculating most county support rates. Effective support price is the established terminal support rate for grain received by rail minus the deduction for storage as of the date shown. Terminal price support rates are not established for corn, oats or soybeans at any market, nor for wheat and grain sorghums at Ft. Worth.

<sup>2/</sup> Galveston effective and terminal support price. A terminal support price is not established for Ft. Worth, but the cash price usually is backed by paid-in freight which will carry it to Galveston. Therefore, cash prices at Ft. Worth usually may be compared with effective support price at Galveston.

<sup>3/</sup> Applies only to the varieties Baart/Burt and Bluestem of the sub-class Hard White.

<sup>4/</sup> The monthly average price is the simple average of the daily closing prices.

BREAD GRAINS ADVANCE - OTHER GRAINS DECLINE

Wheat and rye prices generally advanced during the week ended June 7, but other cash grain markets showed a weak to lower trend.

Hard winter wheat closed 1-3¢ per bushel higher behind fairly good demand for relatively light offerings. Rains delayed harvesting in the Southwest where both farmers and country elevators were reluctant to sell new-crop wheat. The first car of new-crop wheat arrived at Kansas City this week -- a week earlier than last year. Red winter wheat held firm. Spring wheat went up 2-3¢ on good demand for light receipts at Minneapolis, but durum found little support and finished unchanged to 2¢ lower. White wheat, bolstered by export demand for light available offerings, held firm at Portland. Rye went up 4¢ at Minneapolis with good export demand for light receipts.

Corn prices finished mostly 2-4¢ per bushel lower. Favorable crop and weather news were bearish influences. Planting rapidly neared completion in the Corn Belt, while new-crop harvesting got under way in the San Antonio, Texas area. Selling was active, with exporters the biggest buyers. Oats lost 3-5¢ partly in sympathy with the decline in corn, but nearness of the new crop also had a weakening effect on the cash market. Barley found rather limited demand and closed unchanged to 4¢ lower, with malting type at Minneapolis off the most. Some of the downturn, however, represented a shift toward a new-crop basis as harvest was under way in southern areas. Grain sorghum prices were about unchanged. Offerings were readily absorbed at Kansas City, but buyers were more reluctant in Ft. Worth as the new crop was being harvested in South Texas.

Soybean prices weakened in quiet trading. Offerings appeared liberal as buyers were discouraged by a weaker meal market, limited crushings, and favorable crop progress. Flaxseed found light demand from crushers and prices dropped 4¢ per bushel at Minneapolis.

WHEAT AND FLOUR EXPORTS ... now total nearly 655 million bushels for the first eleven months of the season on the basis of official Census data through April and inspections for export for May. This is nearly 45 million more than in the same months last season. June exports of wheat and flour totaled 51.2 million bushels. Flour exports amount to around 100 million bushels in wheat equivalent thus far as against 94 million a year earlier. Nearly 283 million bushels of corn have been exported since the beginning of the season October 1 -- 94 million more than last season and well above any other year of record. Around 12.5 million bushels of soybeans were exported during May on the basis of inspections for export. This brought the total for the first 7 months of the season to 117 million compared with 104 million last season.

TERMINAL AND COUNTY PRICE-SUPPORT RATES FOR 1962-CROP RYE ... were announced this week. Rates are based on the 1962-crop national average support price of \$1.02 per bushel for rye grading No. 2 or better, or grading No. 3 on the factor of test weight only. While the national rate is the same as for last year, support prices at some Midwest terminals have been decreased 2¢ per bushel from last year's rates. Part of this results from shifts in production from the lower to the higher support price areas. Freight rate changes last year also made some changes in price relationships. Omaha and Kansas City terminal rates were set so as to be in line with the Minneapolis rate. Participation in the 1962 feed grain program for corn, grain sorghum, or barley will not be a condition of eligibility for price support on rye.

FOOD FOR PEACE WHEAT OR FLOUR AUTHORIZATION ISSUED TO INDIA ... recently will finance the purchase of \$15.8 million worth (about 250,000 metric tons) of wheat or wheat flour from U. S. suppliers. Authorization was issued under Title I, Public Law 480. Sales contracts made between June 8 and June 30 will be eligible for financing. Delivery will be to importer, f.o.b. vessel, ports of exportation in the case of wheat, or f.a.s. vessel, U. S. ports in the case of flour. Shipments may be made between June 8 and July 31.

<sup>1/</sup> Cash grain closing prices are on-track cash prices established at the close of the market. The terminal rate is used in determining the effective support price for grain in terminal storage or in transit to terminal and for calculating most county support rates. Effective support price is the established terminal support rate for grain received by rail minus the deduction for storage as of the date shown. Terminal price support rates are not established for corn, oats or soybeans at any market, nor for wheat and grain sorghums at Ft. Worth.

<sup>2/</sup> Galveston effective and terminal support price. A terminal support price is not established for Ft. Worth, but the cash price usually is backed by paid-in freight which will carry it to Galveston. Therefore, cash prices at Ft. Worth usually may be compared with effective support price at Galveston.

<sup>3/</sup> Applies only to the varieties Baart and Bluestem of the sub-class Hard White.

<sup>4/</sup> The monthly average price is the simple average of the daily closing prices.

**GRAIN: Commodity Credit Corporation Estimated Non-committed Inventory**

## GRAIN MARKETS UNCHANGED TO HIGHER

Cash grain markets were mostly unchanged to slightly higher during the week ended June 14. Spring wheat and soybeans generally advanced, corn and oats showed gains at selected points while other grains showed little change from a week ago.

Winter wheat markets were firm at about last week's prices with a good demand for light offerings. Harvesting of the new crop was delayed by rains over a wide area although maturity was reported ahead of last year. Export demand continued active. Trading in spring wheat was active and prices advanced 1-2¢ per bushel. Offerings were plentiful but there was a good demand from millers. Durum wheat gained 2-5¢ at the close of the week. The white wheat market was slow in the Pacific Northwest with little change. The rye market was firm, bolstered by export orders. Prices advanced 1¢ per bushel at Minneapolis.

Corn prices closed about unchanged at Chicago with limited demand for large supplies. At other principal midwest points prices ranged 1-3¢ per bushel higher with a fair demand for light offerings. Oats averaged about the same as a week ago at Chicago and Kansas City but advanced 5¢ at Minneapolis to regain the loss of the previous two weeks. Trading in barley was slow with prices generally at last week's level, except for some of the better malting kinds which gained 2-4¢ at Minneapolis. Trading in grain sorghum was good with offerings adequate for the fair demand. Prices remained unchanged.

Soybean prices advanced 2-3¢ per bushel due mainly to the fair demand for light receipts. Export business continued good. The new crop is practically all planted and generally a week ahead of last year. Flaxseed was down 3¢ reflecting weakness in linseed oil and light crushings.

## Special Features

	<u>Page</u>
Grains - export prices at specified points.....	2

Wheat - estimated production by states, June 1, 1962.....	12

CROP PROSPECTS ... as of June 1 call for a 1962 wheat crop of 1,058 million bushels. This is 14 percent less than the 1961 crop and 6 percent below the 1951-60 average, according to the Crop Reporting Board. Winter wheat production is now estimated at 846 million bushels -- 21 percent smaller than last year and 3 percent below the 10-year average. Production of all spring wheat is forecast at 211 million bushels, or a third more than last year's drouth-stricken crop but 16 percent below average. Durum wheat is expected to account for 43 million bushels of the total spring wheat crop this year compared with 19 million in 1961 and the 25-million bushel average. Condition of rye on June 1 was 84 percent of normal -- 4 percent less than a year earlier but 1 percent above the 1951-60 average.

FOOD FOR PEACE BARLEY AUTHORIZATION ISSUED TO ISRAEL ... recently will finance the purchase of \$1.8 million worth of barley from U. S. suppliers. Authorization, issued under Title I, Public Law 480 agreement, provides for purchase of about 31,000 metric tons of barley in bulk, Grade U. S. No. 3 or better, of the classes barley or western barley, excluding malting barley of any type. Sales contracts made between June 14 and November 30 will be eligible for financing. Delivery will be to importer f.o.b. vessel, ports of exportation. Shipments may be made between June 14 and December 31.

GRAIN EXPORTS ... to Canada and through the Seaway totaled 50.6 million bushels during April-May this year. This is 18.8 million more than in the same period last year and 30 million more than two years ago. Of the shipments, 21.5 million were corn, 8.5 million soybeans, 6.3 million wheat, 7.6 million barley, 5.5 million bushels oats and 1.0 million bushels rye. Shipments of U. S. grain from Canadian ports totaled 10.3 million bushels during April-May this year of which 4.8 million were corn, 2.4 million soybeans and 3.1 million wheat. (Details page 10)

<sup>1/</sup> Cash grain closing prices are on-track cash prices established at the close of the market. The terminal rate is used in determining the effective support price for grain in terminal storage or in transit to terminal and for calculating most county support rates. Effective support price is the established terminal support rate for grain received by rail minus the deduction for storage as of the date shown. Terminal price support rates are not established for corn, oats or soybeans at any market, nor for wheat and grain sorghums at Ft. Worth.

<sup>2/</sup> Galveston effective and terminal support price. A terminal support price is not established for Ft. Worth, but the cash price usually is backed by paid-in freight which will carry it to Galveston. Therefore, cash prices at Ft. Worth usually may be compared with effective support price at Galveston.

Burt

<sup>3/</sup> Applies only to the varieties Baart and Bluestem of the sub-class Hard White.

<sup>4/</sup> The monthly average price is the simple average of the daily closing prices.

## GRAIN MARKETS MIXED

Cash grain markets showed a mixed trend during the week ended June 21. Gains and losses generally held within narrow bounds.

Hard winter wheat closed unchanged to 1¢ higher with offerings extremely light for harvest time. Exporters and domestic users were aggressive buyers. Harvesting, although delayed by rains, continued well ahead of last year. Red winter wheat closed unchanged to 1¢ per bushel lower as Chicago received the first cars of the 1962 crop. Spring wheat advanced 1¢ per bushel bringing the gain since June 1 to 6-8¢ per bushel. Receipts were small and demand was active. Durum wheat lost 6-8¢ in limited trading. Prospects for a crop more than double that of last year was a weakening factor. Trading in white wheat in the Pacific Northwest was slow with limited demand for light offerings. Rye dropped 3¢ with improved prospects for the new crop.

Corn markets were dull with slight gains at some markets about offset by losses at other points. Development of the new crop continued good to excellent throughout the heavy-producing areas. Although export interest continued good, domestic demand was limited for rather light offerings. The oats market was slow with prices unchanged to lower at Chicago and slightly higher at Minneapolis. Barley markets were firm with prices unchanged to 3¢ per bushel higher. Grain sorghum advanced 3¢ per cwt. at Ft. Worth behind good demand and meager offerings, but were unchanged at Kansas City.

Soybean markets strengthened with good domestic and export demand. Prices advanced 1-2¢ per bushel. Planting of the new crop was virtually completed in the important-producing commercial belt. Flaxseed went down 5¢ during the week at Minneapolis. Some increase in planting due to too much moisture in the Valley areas of North Dakota and Minnesota was reported.

Grains - amount under price support.....	16

PRICE SUPPORT ACTIVITIES ... showed that farmers put 626 million bushels of 1961-crop corn under price support through May 31. This is slightly more than the 611 million put under from the 1960 crop. Farmers had delivered 111 million bushels of 1961-crop wheat -- less than half the 236 million delivered a year earlier. Farmers delivered 104 million cwt. of grain sorghum by the end of May -- around 10 million more than from the 1960 crop. (Details by States, pages 8-15)

SOYBEANS CRUSHED ... for oil during May totaled 35.3 million bushels as against 36.5 million bushels in April and 34.3 million bushels in May 1961. Crushings, October through May, totaled 302 million bushels - 15 million bushels more than during the same period last season. Exports for the same eight months totaled nearly 118 million bushels, an increase of 13.5 million bushels over a year earlier. Supplies for processing, export or carryover totaled 241 million bushels this June 1, or around 94 million bushels more than on June 1, 1961. Stocks of soybeans at processing plants totaled 51.9 million bushels at the end of May compared with 61.5 million bushels at the end of April and 67.5 million bushels at the end of May 1961.

WHEAT PRICE-SUPPORT ... eligibility provisions were relaxed for the special durum wheat program where adverse weather prevented producers from meeting the requirement of increasing durum wheat acreage above 1960-61 average plantings. The new provisions enable producers to receive 1962 wheat price support in instances where adverse weather has prevented plantings of durum wheat above the 1960-61 average durum acreage. Unusual weather, particularly in North Dakota, has prevented some farmers who signed under the special durum program from increasing their plantings.

<sup>1/</sup> Cash grain closing prices are on-track cash prices established at the close of the market. The terminal rate is used in determining the effective support price for grain in terminal storage or in transit to terminal and for calculating most county support rates. Effective support price is the established terminal support rate for grain received by rail minus the deduction for storage as of the date shown. Terminal price support rates are not established for corn, oats or soybeans at any market, nor for wheat and grain sorghums at Ft. Worth.

<sup>2/</sup> Galveston effective and terminal support price. A terminal support price is not established for Ft. Worth, but the cash price usually is backed by paid-in freight which will carry it to Galveston. Therefore, cash prices at Ft. Worth usually may be compared with effective support price at Galveston.

<sup>3/</sup> Applies only to the varieties Baart and Bluestem of the sub-class Hard White.

<sup>4/</sup> The monthly average price is the simple average of the daily closing prices.

## GRAIN PRICES SHOW MIXED TREND

Cash grain prices continued to show a mixed trend during the week ended June 28. However, except for a sharp drop in spring wheat and rye markets, gains and losses were generally limited to 1 or 2¢.

Hard winter wheat held firm in the Southwest, supported by light selling and a very active demand from mills, elevators and exporters. Prices for both hard and red winter wheat, on the other hand, were unchanged to 2¢ per bushel lower in the Midwest where the harvest was in full swing and offerings were more liberal. Demand was good but buyers were a little more reserved than recently. Heavier than expected sedimentation values have channeled a substantial amount of wheat into the loan program even though cash prices are well above a year ago. However, crowded handling and storage facilities in the interior are resulting in a large amount of wheat passing to terminals. Spring wheat dropped 3-6¢ per bushel and durum was off 7-12¢ at Minneapolis. Buyers influenced by quiet flour trade, a lack of export inquiry, an unsettled labor contract at Duluth and uncertainty over rejection of the farm bill, adopted a "wait and see" attitude. Soft white wheat held firm at Portland. Trading was narrow with limited offerings of both old and new-crop wheat. Rye dropped 5¢ at Minneapolis as buyers were content to wait for the new crop and offered little support for the cash market.

Corn prices fluctuated within a narrow range and finished mostly unchanged. Crop development was rapid throughout the Corn Belt. Offerings were relatively light but about equal to trade needs. Exporters again provided good outlets. Oats followed the action in corn and closed mostly unchanged. Barley prices were unchanged to 4¢ lower with little support from maltsters or other terminal buyers. Grain sorghum prices went up 2-3¢ per cwt. behind fairly good demand for reduced offerings.

Soybean prices weakened along with markets for their end products and reports of favorable crop progress. Flaxseed held steady at Minneapolis.

Soybeans and flaxseed - supply and distribution, monthly.....	8

WHEAT ACREAGE ALLOTMENT OF 55 MILLION ACRES FOR 1963 ... was announced by the Secretary of Agriculture this week. The announcement was made to comply with existing law so that in the event Congress does not enact new wheat legislation adequate time will be given to prepare for a marketing-quota referendum on 1963-crop wheat prior to July 25. Other actions included in this announcement were:

(1) Proclamation of marketing quotas on the 1963 crop, (2) announced State shares of the national allotment, (3) announced a 39-State commercial and 11-State non-commercial wheat-producing area for 1963-crop wheat, and (4) set the minimum national average support price for 1963-crop wheat at \$1.82 per bushel.

COUNTY AND TERMINAL PRICE-SUPPORT RATES FOR 1962-CROP BARLEY ... were set this week. Rates are based on the 1962-crop national average support price of 93¢ per bushel for grade No. 2 or better barley. Terminal rates have been adjusted downward from 1-3¢ per bushel compared to 1961 rates to reflect production shifts, market price relationships and other factors. County and terminal rates are further adjusted by discounts for grade and quality to determine support prices for individual producers.

COUNTY AND TERMINAL PRICE-SUPPORT RATES FOR 1962-CROP GRAIN SORGHUM ... were announced this week. Rates are based on the national average support price of \$1.93 per cwt. for 1962-crop grain sorghum grading No. 2. Although the 1962 national average support price is the same as for 1961, Gulf and California terminal rates were increased 1¢ per cwt. for 1962 to reflect changes in market price relationships. County and terminal rates are further adjusted by premiums and discounts for grade and quality to determine support prices for individual producers. Revisions in grain sorghum grade standards which become effective August 1 will be used for the 1962 support operation.

CORRECTION: Soybeans crushed for oil during May totaled 38.6 million bushels instead of 35.3 million as reported on page 2 of June 22 Grain Market News.

<sup>1/</sup> Cash grain closing prices are on-track cash prices established at the close of the market. The terminal rate is used in determining the effective support price for grain in terminal storage or in transit to terminal and for calculating most county support rates. Effective support price is the established terminal support rate for grain received by rail minus the deduction for storage as of the date shown. Terminal price support rates are not established for corn, oats or soybeans at any market, nor for wheat and grain sorghums at Ft. Worth.

<sup>2/</sup> Galveston effective and terminal support price. A terminal support price is not established for Ft. Worth, but the cash price usually is backed by paid-in freight which will carry it to Galveston. Therefore, cash prices at Ft. Worth usually may be compared with effective support price at Galveston.

<sup>3/</sup> Applies only to the varieties Baart and Bluestem of the sub-class Hard White.

<sup>4/</sup> The monthly average price is the simple average of the daily closing prices.
